

# Combi™ Laryngoscopes

## What is the COMBI™ System? - Ready for use in seconds

The Combi is a one piece system with Blade and Handle fixed together allowing Test in the Bag functionality testing prior to use. It is based on a Conventional system with mLED™ (metal enclosed) LED on the blade powered by a preloaded 6V battery handle giving excellent light output when and where it is required.

### Test in Bag Packaging

Our innovative and user friendly packaging allows no touch, full activation testing of the laryngoscope in the bag. This critically not only checks the intensity of the light output but also the electro-mechanical function of the light switching.

Easy to identify colour coding and large sizing information ensure you spend less time looking for the device you need when you need it.

## Metal Max COMBI Disposable Laryngoscope Blade & Handle One Piece System with Preloaded 6V Battery

- Pre-Fitted, permanently attached blade and handle set with pre-loaded 6V batteries
