

I.C. Medical's Telescopic PenEvac1 is the world's most sophisticated electrocautery pencil.

The PenEvac1® puts total control in the surgeon's hands, while capturing and removing surgical smoke at the point of origin

- Slender, lightweight and ergonomic
- Compatible with any electrode on the market, including hex electrodes.
- A 45-degree swivel handle that gives the surgeon superior control.
- Transparent suctioning nozzle leaves the surgeon's visual field clear.
- Wiring is safely encased inside the tubing.
- The tubing connection rotates 360 degrees to eliminate torque.
- Textured, non-slip gripping surface and tactile cut and coag activation buttons assure safe handling.
- Similar in diameter and heft to legacy electrocautery pencils without integrated smoke evacuation capability.

The Telescopic PenEvac1®

- Eliminates the need to change electrodes during a procedure.
- A slight counter-clockwise quarter turn of the locking ring enables the surgeon to vary the length of the electrode.
- The electrode can be positioned at any point between 1.5 inches and 6.5 inches.

The Non-Telescopic PenEvac®

- A low-cost PenEvac® alternative that removes surgical plume efficiently, safely and quietly.
- The electrode is adjustable and extendable.
