INSPIRATION

TENSEGRITY is a form of construction that uses rigid elements interconnected by tensioned cables or ropes to create strong, flexible, and adaptable structures. It is used in structural engineering, architecture, and mechanical systems design. In nature we find it in the human body within the bone structure, the muscular system, the connective tissue, as well as spider webs, bird nests and fern leaves.

HOW IT WORKS

To allow a smooth and uniform expansion, SHAD developed a tension cable system with 4 incorporated guides inside of the case's frame. Creating **DYNAMIC TENSEGRITY**.
