

# Spreader Sticker

## Non-Ionic Surfactant

**Hi-Yield® Spreader Sticker** makes almost all chemicals more effective by breaking down the surface tension of water. This breakdown causes water to disperse, giving complete and total coverage on surfaces. **Hi-Yield® Spreader Sticker** helps water to resist the repellent tendency of waxy surfaces and also helps water to penetrate through soil and organic matter.

**Insecticides** – Works with almost all Insecticides:

- Gives complete leaf coverage, increasing absorption, increasing contact kill and creating a better, longer lasting residual control.
- Coats adult insects to improve effectiveness on hard to control insects, such as Grasshoppers, Stink Bugs, Squash Bugs, etc.
- Helps to penetrate and adhere to webs of Tent Caterpillars and Bagworms.
- Helps drenches to penetrate the soil and adhere to the roots to increase absorption.

**Herbicides** – Works with almost all Herbicides:

- Gives complete leaf coverage, increasing absorption, increasing contact kill and creating a better, longer lasting residual control.
- Must be used with Over-the-Top, Grass Killer, Turflon Ester and Nutsedge Control.

**Fungicides** – Works with almost all Fungicides:

- Gives complete leaf coverage, increasing absorption, increasing contact kill and creating a better, longer lasting residual control

**Fertilizers** – Works with almost all fertilizers:

- Gives complete leaf coverage, increasing absorption, increasing contact kill and creating a better, longer lasting residual control.
- Increases the penetration and adheres the fertilizer to the roots for better absorption, thus making it work better.

### Avoid Use With:

Do not use **Hi-Yield® Spreader Sticker** with the following products; **ferti•lome® Weed Free Zone**; this product is “HOT” enough already and you may burn portions of the yard. Any Oil Products such as: **ferti•lome® Horticultural Oil** or **Hi-Yield® Dormant Oil**, also **Natural Guard® Brand by ferti•lome® Neem Oil** including **ferti•lome® Triple Action**, **ferti•lome® Fruit Tree Spray** and **Natural Guard® Brand by ferti•lome® Neem**, **ferti•lome® Fire-Blight Spray** and Soaps such as **Natural Guard® Brand by ferti•lome® Copper Soap**, **Natural Guard® Brand by ferti•lome® Spinosad Soap** and **Natural Guard® Brand by ferti•lome® Insecticidal Soap**, **ferti•lome® Weed-Out Nutsedge Control** and finally **Hi-Yield® Dusting Sulfur**.

**Do Not Use Dish Soap!** Dish soap is ionic so it can react with the chemical, it also leaves a sticky residue and most soaps have degreasers that burn plants, often faster than the chemical can work.

### Skip the detergent

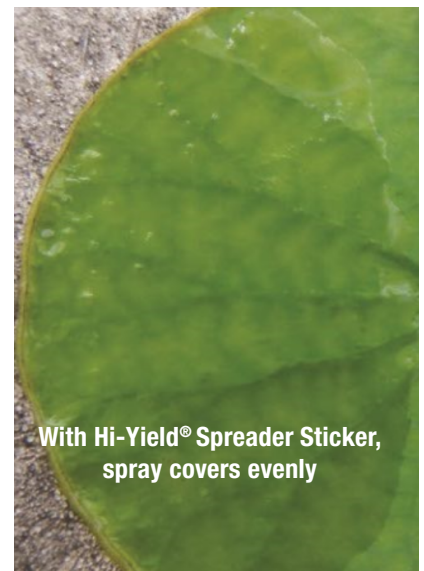

Do not use dish soaps or detergents to control insect or mite pests. Dishwashing liquids and laundry detergents such as palmolive, Dawn, Ivory, Joy, Tide and Dove are primarily designed to dissolve grease from dishes and cleaning clothes not to kill insects and mite pests. Furthermore, these materials contain coloring agents, perfumes, and de-greasers that may cause plant injury (phytotoxicity) by dissolving the waxy cuticle on the leaf surfaces. What is most important, is that these materials are not registered pesticides as they do not have an EPA (Environmental Protection Agency) number. So it is illegal to use these detergent products as pesticides.
