Lift electric height

Tools required

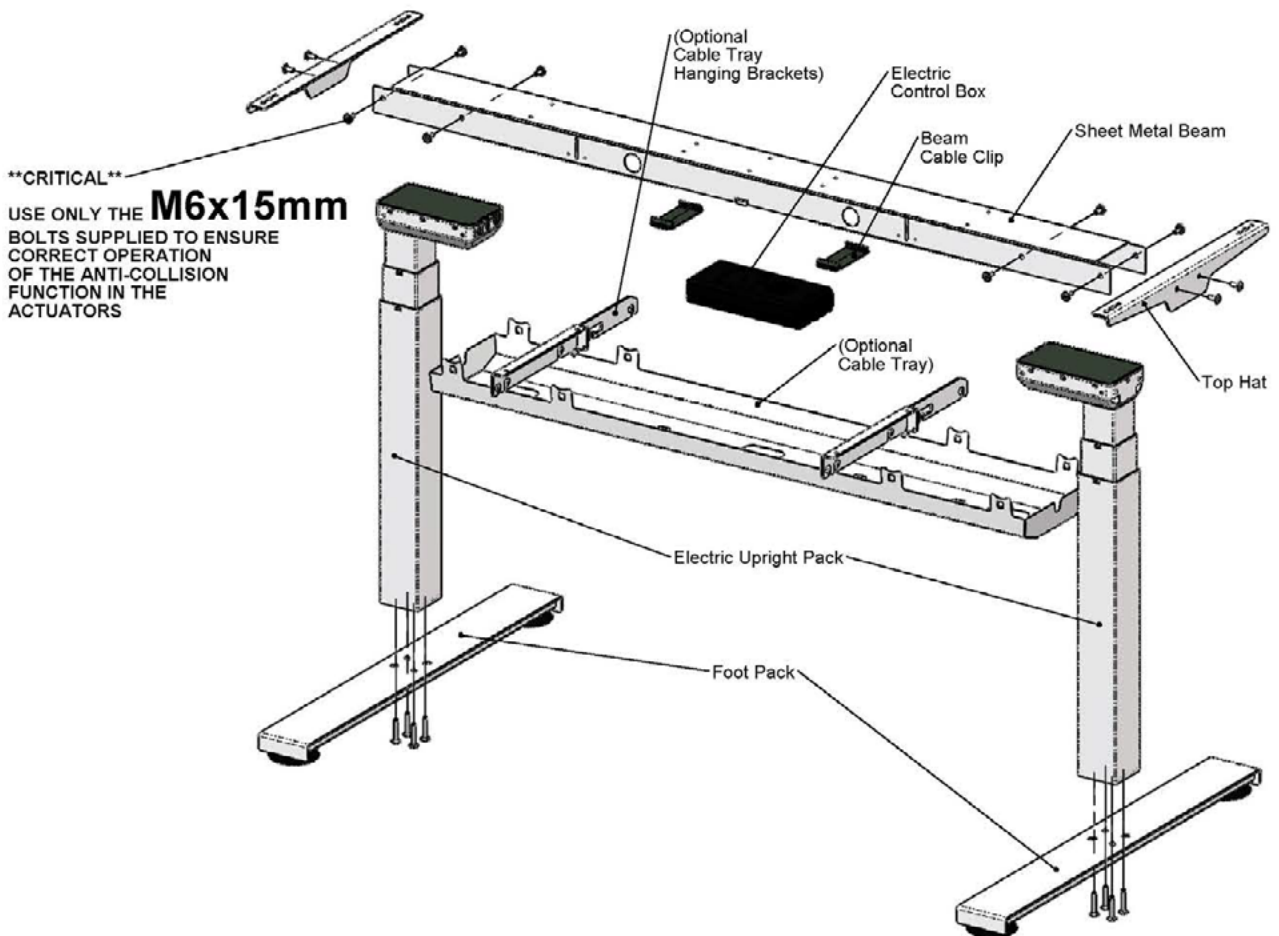

4mm
allen key

Pozi
screwdriver

Hardware

1x "desk" fitting kit
per position

Lift electric height

Assembly Procedure

- Attach the foot assemblies to the bottom of the electric actuators using the M6 x 35 bolts provided in the fittings kit.
- Stand the leg assemblies up and attach the sheet metal beam and top hats with M6 x 15mm bolts supplied in the fitting's kits.

NOTE: It is critical that only the supplied bolts are used to ensure the correct operation

- Ensure that all bolts are tightened securely to maintain desk stability.
- If fitting the optional cable tray, slot the hanging brackets into the corresponding slots and secure with screws provided in the cross rails as shown.
- Turn the whole assembly upside down and lay it on top of the upturned desktop. Secure the frame to the desktop with a choice of M6 x 15 bolts or woodscrews provided in the fittings kit.
- Offer the electric control box up into the beam at the centre point, insert and bend tab to secure.

NOTE: it is also critical that the control box is screwed to the underside of the desktop (through the upper beam) to ensure the correct operation of the collision detection system

- Connect each actuator to the control box with the motor cables and insert the control switch before installing the mains power cable. Beam cable clips can be fitted to tidy up loose or hanging cables.
- Secure the control switch to the underside of the desktop in the desired location, ensuring the wire is fed through a suitable hole in the beam.
- On first start up it is necessary to calibrate the actuators by holding both buttons on the control switch for 6 seconds after the frame reaches the bottom of its stroke.

Lift electric height

Electric sub-assembly procedure

- Lay the actuators down on a flat surface with the housings pointing upwards.
- Slide the collar mouldings over the actuators.
- Orientate the quick release mouldings so that the grub screw bosses are directed towards each other.
- Fix the quick release mouldings to the bottom of the actuators as shown, using the M6 x 15 connector bolts provided.

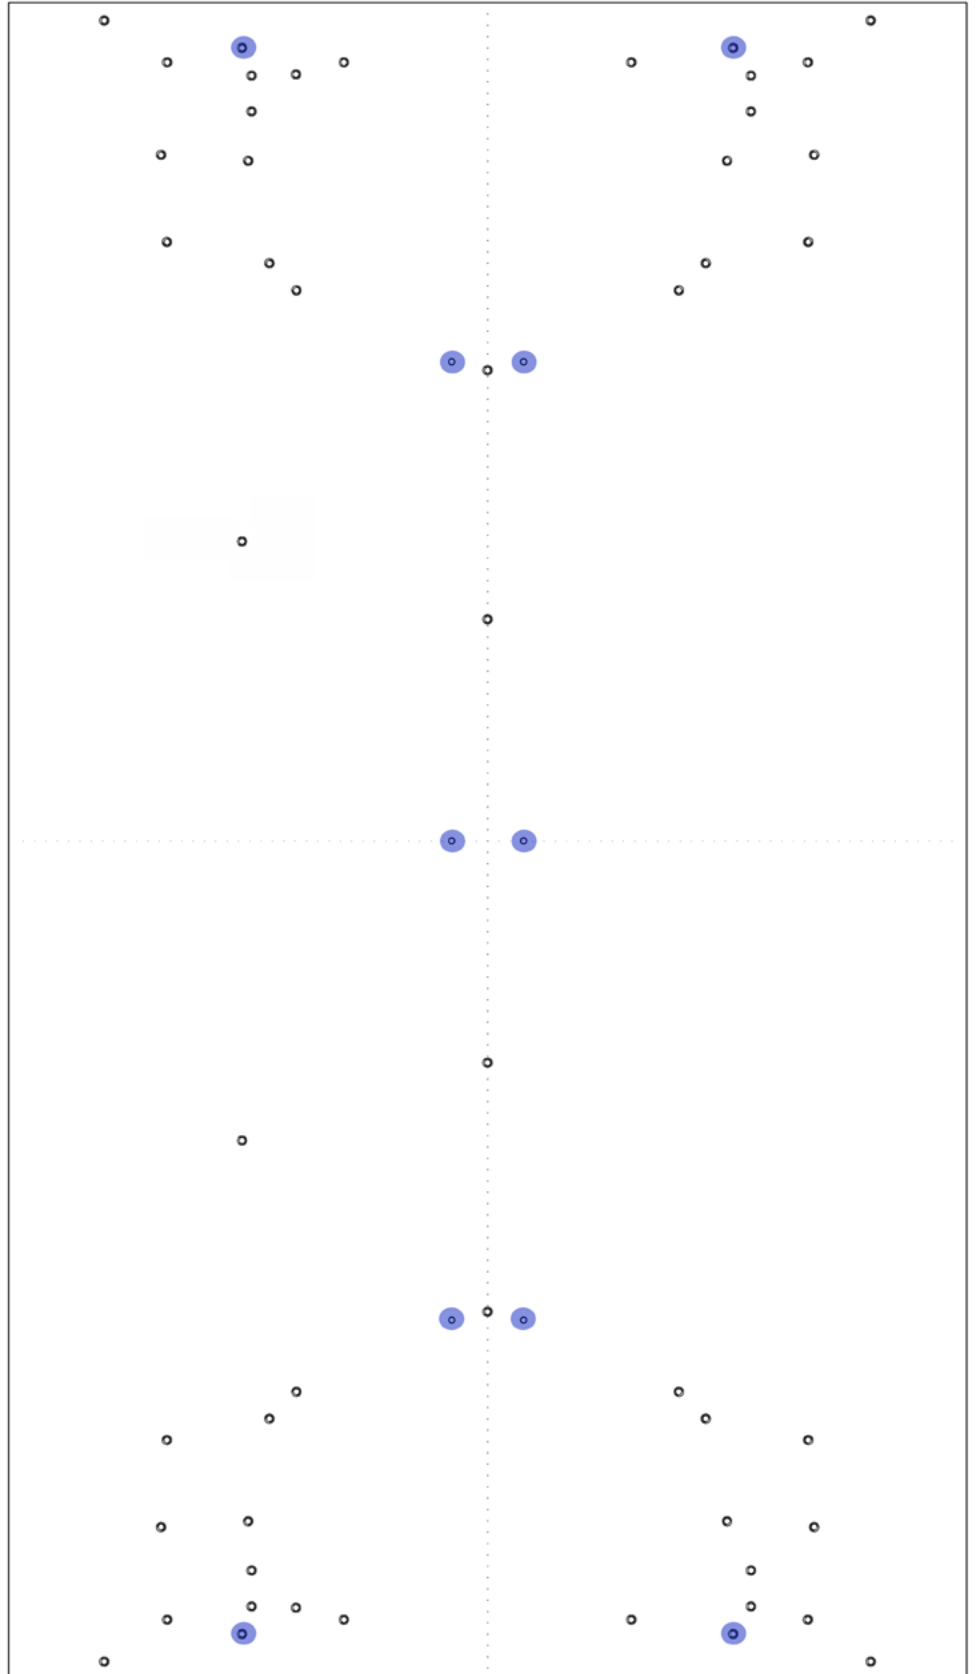

Inserting the actuator sub-assembly into the leg frame

- Slide the collar moulding onto actuator body before attaching the quick release moulding.
- Ensure grub screw is fully wound in before sliding actuator into the leg frame.
- Once actuator assembly has been lowered into leg frame, insert the allen key into the frame and un-wind grub screw to engage – DO NOT OVERTIGHTEN.
- Removal is a reversal of the insertion procedure.

Lift electric height

If you've been supplied a top with multiple inserts (quick ship option), you will be using the highlighted inserts for this framework.

Lift electric height - Operations

1. PANEL

2. INITIALIZATION PROCEDURE

| STEP | OPERATION | MOTION |
|------|---|--|
| 1 | Press and hold ▲ & ▼ simultaneously for more than 3 seconds | Legs begin to move down at half speed of normal operation |
| 2 | Keep pressing ▲ & ▼ | Legs move down to the lowest position and rebound 2-5mm, then stop |
| 3 | Release ▲ & ▼ together | Initialization is completed |

The initialization procedure must be completed before the first running, after the table is installed or parts have been replaced.

3. MOVE UP AND DOWN

| STEP | OPERATION | MOTION |
|------|------------------|----------------|
| 1 | Press and hold ▲ | Legs move up |
| 2 | Release ▲ | Legs stop |
| 3 | Press and hold ▼ | Legs move down |
| 4 | Release ▼ | Legs stop |

TROUBLE SHOOTING

| FAULT PHENOMENOM | SOLUTION |
|--|---|
| After connecting the power, press up or down, the legs have no response | Re-initialize the table; |
| | Check if the connection is correct or not; |
| | Please contact your supplier |
| After connecting the power, press and hold up & down together, the legs have no response | Check if the connection is correct or not; |
| | Please contact your supplier |
| The legs rising slowly | Check if the input power is correct or not; |
| | Please contact your supplier |
| The legs don't move according to your operation | Please contact your supplier |
| One leg moves while the other leg does not move | Check if the input power is correct or not; |
| | Please contact your supplier |
| Legs only move down and don't move up | Re-initialize the table; |
| | Please contact your supplier |
| Table slides down itself | Check if the weight of the load on the table exceeds 75KG or not; |
| | Please contact your supplier |
| The table goes into initialization frequently | Check if the weight of the load on the table exceeds 75KG or not; |
| | Check the noise of the motor; |
| | Please contact your supplier |
