

HOW TO HANG

THE VITACURA WALL HOOKS

Your package includes two wood hooks (large and small), two brass bases (large and small), two screws, and two anchors. To hang these beauties, you'll also need to grab a drill and hammer.

STEP 1: X" MARKS THE SPOT

Hold the brass base up against the wall. Lift one side to mark the center of the base on the wall.

Note: The small brass base goes with the small wood hook, and the large brass base goes with the large wood hook. Plan wall placement accordingly!

MORE ASSEMBLY INSTRUCTIONS ON BACK

STEP 2: TIME TO DRILL

Determine if you are drilling into a wall stud. If so, use a $\frac{3}{32}$ " drill bit to make a hole on your mark. Drill at 90-degree angle for best results. Then, place the brass base on the wall over the hole. Drill the screw through the hole in the base into the wall.

If you are not drilling into a stud, you'll need to use the anchor provided. Use a $\frac{1}{4}$ " drill bit to create the hole and carefully hammer the anchor into the wall until it is flush. Then, place the base on the wall over the anchor. Drill the screw through the hole in the base - straight into the anchor in the wall.

STEP 3: THE FINISH

Hand screw the wood hooks into the brass bases. Voila! You're all set.
