

HOW TO TURN YOUR MEGAWATT ON AND OFF

1. Locate the power switch on the top tube

2. Press and hold until Shimano Steps logo appears

3. Your bike will power on and come to this screen

4. Use the handlebar switch to select desired mode

5. To switch off the bike at the end of the ride, press and hold the power switch until the screen goes blank

Note: It is good practice to turn the bike on with out having your foot on the cranks. If you have your foot on the crank, this can cause an error upon start up (W013)

If this happens, switch the bike off and start with no weight on the cranks
