Read the operation manual carefully prior to use

1. General information

Thank you for purchasing one of our machines, and we hope that you will be fully satisfied.

This guide provides instructions for the installation, adjustment, operation and maintenance of the machine B10 ELECTRA in compliance with valid safety standards.

The information and data contained in this document subject to changes due to further improvement of machinery. To eliminate any doubts, when differences are detected, please contact N.KO Machines.

Never perform any operation on the machine before you read the instructions in the manual and understand them. Major part of accidents that happen in the workplace are due to the fact that the guidelines and recommendations contained in the manual are not complied with.

The graphic symbols used in the manual are intended to emphasize the important information regarding the safety and operation of the machine.

Attention :

Information important for the personal safety of the operating staff.

Important:

Instruction that needs to be observed to ensure the proper function of the machine.

2. Machine description B10 ELECTRA

Machine B10 ELECTRA is designed solely for the activities below:

B10 ELECTRA is designed solely for bevelling and fetch fettling of metal materials in the workshop or in the production hall.

This includes manual and manually managed machine. The main feature of the machine is the ability to machine flat and shaped workpieces, openings, and tubes. The machining angle can be changed by replacing the milling head. B10 ELECTRA can perform also the workpiece edge rounding. This application also requires a special tool, see the text below.

Use the machine in the environment protected from rain, snow, and other adverse weather conditions.

3. Identification data and CE Declaration of Conformity

The identification data of machine B10 ELECTRA are listed on the label placed on the drive unit.

EC Declaration of Conformity

1. Name and surname of the declaration issuer: N.KO spol s.r.o.

Address of the declaration issuer:

Táborská 398/22

CRN:

2616109

2. Subject matter of the declaration:

Name:

HAND HELD BEVELLING MACHINE

Type:

B10 ELECTRA

Manufacturer: N.KO, spol. s r.o.

3. Intended use: Edge bevelling of sheets as preparation for welding

4. The above-stated subject matter of the declaration complies with requirements of the

following documents:

Directive 2006/42/EG: Machinery Safety – Basic Requirements

Directive 2014/30/EU: Electromagnetic Compatibility

Directive 2011/65/EU: Absence of hazardous substances

EN ISO 12100:

Safety of machinery - Basic concepts, general principles for design -

Risk Assessment and Risk Reduction

EN ISO 13857:

Safety of machinery - Safety distances to prevent hazard zones being

reached by upper and lower limbs

EN 953:

Safety of machinery - Guards - General requirements for the design

and construction of fixed and movable guards

EN 60204-1:

Safety of machinery - Electrical equipment of machines

EN 60745-2-17:

Hand held electromechanic machinery - safety - Part1.: General

requirements

EN 50581:2012

Technical documentation for assessment of electrical and electronic

products in terms of reduction of hazardous substances

EN 61000-3-2

Electromagnetic-compatibility (EMC) - Part 3-2: Limits - Limits for

harmonic current emissions-(device with input phase

current ≤16 A)

EN 61000-3-3

Electromagnetic-compatibility (EMC) part of the furnace 6-3: Generic

standards - Emission standard for residential, commercial and light

industry

Data on accredited / notified person:

Date and place of issue: 1. OCTOBER 2017 Mladá Boleslav

Name and position of the authorized person: Milan Richtr - managing director

Signature of the authorized person:

4. Tests

The machine for edges bevelling is tested in our test room.

During that test, the correct function of bevelling sheets and profiles by different types and sizes, are tested.

5. Warranties

The B10 ELECTRA is provided by the seller with a guarantee that the article shall not feature any material and production defects for a period of 12 months following the delivery date.

The machine is provided with a 12-months' guarantee from the delivery date for the faultless function of the article and the materials used.

The seller undertakes to make sure that any potential warranty defects are removed free of charge and without undue delay so that the buyer is able to use the article the way they desire. Should the buyer claim liability for warranty-unrelated defects, it shall reimburse the seller for any expenses associated with that.

The manufacturer considers the guarantee invalid if:

- the machine is improperly used.
- used in conflict with national or international standards
- improper installation
- defective power supply
- severe shortcomings in maintenance
- unauthorised modifications or interventions
- other than the original or unapproved parts and accessories by the manufacturer are used for that model;
- full or partial failure to follow the instructions in this manual
- extraordinary events, natural disasters or the like.

6. Safety regulations

Attention :

In order to prevent the injury observe the below instructions

Inspect the machine for mechanical and other damage prior to bevelling. **Commission the machine solely if the electricity supply cable is not damaged.** Check the supply cord regularly. In case of damage have it replaced in an authorised service shop authorised to perform the such repairs. Contact your supplier.

Personal protection from injury

During the work use safety goggles, solid work footwear, hearing protection, suitable head cover, e.g. safety helmet.

- Connect the machine in electrical network solely if the machine is in off position.
- Prior to each use, check the device and electricity supply cord for damage. Do not use the machine in case of any damage.
- Do not use the machine in humid environment and protect from high moisture.
- Ensure good lighting at the workplace to prevent the risk of potential injury or eyesight damage.
- Caution, the tool (milling machine) is sharp with the risk of injury. During the replacement use safety gloves, **never touch the miller which moves.**
- The machined material must always be fastened and horizontal. Optimum workpiece height is 900 mm above ground.
- During work pay attention to the electricity supply cable; it should be loosely placed on the ground outside the worked material and other sharp objects.
- After work, disconnect equipment from the electricity supply.
- Do not overload the machine motor. The machine operates better if not overloaded.
- During work, hold the device by both hands.
- Attention is drawn to the injury hazard with hot metal shavings.

Important:

In case of damage have the machine repaired in an authorised service shop authorised to perform the repairs. For more information on, contact your supplier.

7. Technical specifications

Bevel angle	Replacement head 30°, 37,5°, 45°, 50°, 60° other angles upon request
Bevel width (45°)	0 to 10 mm / 0 to 0,4 in< 400N/mm2/ 58 015 PSI - 0 to 5 mm > 400N/mm2/ 58 015 PSI

8. Machine equipment

Unpack the machine from the cardboard box and check if the machine is ok and free from damage. If necessary contact the seller.

Machine B10 ELECTRA is supplied with required tools for the operation without the tool.

Purchase the tools. The review of tools is defined in chapter 8. Accessories or in the catalogue of N.KO Machines and contact your supplier.

9. Control elements B10 ELECTRA

Fig.10.0.1

- A. Handle
- B. Motor body
- C. Scale for reading the bevel size setting
- D. The miller unit with indexable inserts
- E. Guiding, stop miller roller and roller screw
- F. The arresting screws of the thrust plate sleeve The set removal provision
- G. The thrust plate with sleeve
- H. Main switch

10. Use

Important:

The device can be used solely if it is fitted with the original indexable inserts supplied by our supplier, i.e. the device manufacturer. It includes four-sided indexable inserts. The device can be fitted with 6 pieces of indexable inserts. It is prohibited to use other than original inserts.

11.1 Setting the removal size

Attention :

During the adjustment operation, wear gloves and other personal protective equipment. The operations must be carried out on the machine at rest and after disconnecting from the power supply.

- Disconnect the machine from electricity supply.
- Release the setting arresting screws (fig.10.0.1 position F)
- Turn the guiding plate (fig.10.0.1 position G) for setting the reduction size. You can read the setting on the scale (fig.10.0.1 position C). The scale is just indikative. The final result bevel size can be little bit different according of the milling head you are using.
- After setting, fasten both screws (fig.10.0.1 position F).

Important:

Maximum reduction is 10mm of bevel width (dimension P fig.11.1.1). The reduction can be achieved in more steps. It depends on the material solidity. We recommend performing the test.

Start with lower reduction and gradually increase the value until the work with the machine is comfortable and the plates can achieve gradually reduction without increased vibrations. For orientation setting, use the tables below.

We recommend administering the work log for recording the measured value and the machining procedure.

Fig. 11.1.1

For orientation setting of the reduction size and the independent machining process, use the setting tables for individual bevel angles.

Important:

The values in the table are calculated from point 0. Point is the point when the miller touches the material edge for the first time. This point can be set by gradual turning of the thrust plate (fig.10.0.1 position G) and placing to the material edge.

45° - For full bevel (P=10mm) is required, turn the thrust plate by 40 revolutions

Chip no.	Hypotenuse P	Bevel height A	Number of rpm of the thrust plate (Fig.10.0.1 pos. G)
I.	5mm/0,19 in	3.5mm/0,13 in	2 Revolutions
II.	10mm/0,39 in	7.7mm/0,30 in	+ 2 Revolutions

The machine was constructed for the preparation of welded surfaces. Machining accuracy is within limit

+/-1mm. The condition for reaching the satisfactory results is a perfect preparation of the material edges. Unfortunately the material is often burned or cut. The inaccuracy shall be reflected on the resulting machining.

Important:

If it is difficult to machine the bevel within the recommended number of steps, we recommend dividing the process to more chips. The reason can be the wear of the cutting inserts or worse machining properties of material.

11.2 Bevelling

- Connect the device in electricity distribution
- Set correct RPM in the range of 4 6 on the plastic regulation wheel.
- After careful setting of the first reduction, see clause 11.1, hold the device with both hands and use the main switch to switch on the device.
- Fit the machine on material in such way the thrust/contact plate (fig. 10.0.1 position G) was in contact with material at maximum possible surface.
- Slowly move the machine to the material until you feel the milling machine is in reduction. CAUTION!!! The rebound is possible at this moment, be careful.
- Press the machine in the direction into the material until the miller is embedded in the material in the full profile of the set chip. Contact roller (fig. 10.0.1 position E) must now touch the workpiece edge. The thrust plate (fig. 10.0.1 position G) must be placed with the surface on material.
- Now, you can start the machining from the left to the right. Shift the machine
 constantly; using only such speed the milling machine was able to remove material
 in the set chip profile. Otherwise, the milling machine will be pushed out from the
 material and the bevel will be unequal.

Important:

B10 Electra allows to adjust RPM continuously in the range 2700 - 8500 RPM. Current RPM is possible to check on the setting regulation wheel, which is located on the upper side of the motor house B10 Electra (values 1 - 6).

For bevelling of the steel is strictly recommended to use setting in the range 4 - 6 on that regulation wheel only.

In the case of the setting lower RPM there is the risk of the damading of the gearbox due to too high vibrations.

Attention :

During work, wear gloves and other personal protective equipment.

The maintenance operations must be carried out on the machine at rest and after disconnecting from the power supply

The shift during machining is always from left to the right.

Attention:

The device operators must hold the device with both hands.

11.3 Bevel angle and shape change. Milling head replacement – Type ECO

Machine B10 ELECTRA is constructed for the use of more milling heads.

For the head replacement, proceed as follows.

- Disconnect the machine from electricity supply.
- Release the setting arresting screws (fig.11.3.1 position A) by the enclosed allen key (fig. 11.3.1 position C)
- Turn the guiding plate (fig.11.3.1 position B) for complete disassembly from the machine
- Secure the spindle against turning with the button, which is located on the top side of the gearbox (fig 11.3.2 position A) or by using the enclosed mandrel (fig. 10.3.3 position A)
- Use the allen key (fig.11.3.2 position D), release and disassemble the roller screw (fig. 11.3.2 position C) and roller (fig.11.3.2 position B)
- Now disassemble the milling head by enclosed special tube, double-sided spanner (fig.11.3.3 position B plus C)
- Use the same process to assemble new head and reassemble the machine.
- All connections must be appropriately fastened.

Fig. 11.3.1

Fig. 11.3.2

Fig. 11.3.3

Always, when the milling head is replaced, treat the head thread and the screw with copper-containing grease (copper paste). This paste prevents the thread of the milling head from being jamed / sealed and facilitates future loosening.

Attention :

During the adjustment operation, wear gloves and other personal protective equipment. The operations must be carried out on the machine at rest and after disconnecting from the power supply.

11.4 Replacement of indexable inserts - ECO

Important:

Work solely with sharp and not damaged indexable inserts. It prevents the machine damage. If the cutting inserts are worn or damaged or cracked, they must be replaced.

- Attach the wrench (fig. 11.3.1 position D) release the screws used for fastening the indexable inserts (fig. 11.3.1 position C)
- Indexable inserts (fig. 11.3.1 position B) replace with new, different, or just turn them to use all cutting edges.. Attention! Considering the specific shape, focus on this operation.
- Indexable inserts must be appropriately fastened (fig. 11.3.1 position C).
- Assemble the guiding plate set according to chapter 11.3

Fig. 11.4.1

11.5 Bevel angle and shape change. Milling head replacement — Type PREMIUM

Machine B10 ELECTRA is constructed for the use of more milling heads.

For the head replacement, proceed as follows.

- Disconnect the machine from electricity supply.
- Release the setting arresting screws (fig.11.5.1 position A) by the enclosed allen key (fig. 11.5.1 position C)
- Turn the guiding plate (fig.11.5.1 position B) for complete disassembly from the machine
- Secure the spindle against turning with the button, which is located on the top side of the gearbox (fig 11.3.2 position A) or by using the enclosed mandrel (fig. 10.5.2 position A)
- Now disassemble the milling head by enclosed special tube, double-sided spanner (fig.11.5.2 position B plus C)
- Use the same process to assemble new head and reassemble the machine.
- All connections must be appropriately fastened.

Fig. 11.5.1

Fig. 11.5.2

Always, when the milling head is replaced, treat the head thread and the screw with copper-containing grease (copper paste). This paste prevents the thread of the milling head from being jamed / sealed and facilitates future loosening.

Attention :

During the adjustment operation, wear gloves and other personal protective equipment. The operations must be carried out on the machine at rest and after disconnecting from the power supply.

11.6 Replacement of indexable inserts - PREMIUM

Important:

Work solely with sharp and not damaged indexable inserts. It prevents the machine damage. If the cutting inserts are worn or damaged or cracked, they must be replaced.

- Attach the wrench (fig. 11.6.1 position D) release the screws used for fastening the indexable inserts (fig. 11.6.1 position C)
- Indexable inserts (fig. 11.6.1 position B) replace with new, different, or just turn them to use all cutting edges.. Attention! Considering the specific shape, focus on this operation.
- Indexable inserts must be appropriately fastened (fig. 11.6.1 position C).
- Assemble the guiding plate set according to chapter 11.5

Fig. 11.6.1

12. Maintenance and operation

Maintenance of machine B10 ELECTRA does not require any special tools and it is very simple. Keep the machine clean and replace the lubrication grease in the machine gearbox every 1000 working hours. This operation must be performed solely in authorised service N.KO Machines.

Regularly check the supply power cable. In case of damage have it replaced in an authorised service shop authorised to perform the such repairs. Contact your supplier.

When using the B10 Electra with or without the B-Dock accessory, we strictly recommend to instal the protection felt plug into the headstock. The felt plug ord.No. 25315 is needed to buy separately as a accessory. The plug protects the auxilliary bearing and the gear against to be damaged.

The moving parts, threads, and mechanical connections must be gradually cleaned using compressed, and must be preserved (greased).

Attention:

When using compressed air for cleaning, wear safety goggles and never use a pressure exceeding 2 bar.

13. Spare parts

Orders of spare parts shall contain the following information:

- machine type;
- serial number;
- Description of required part and its number
- quantity.
