DeTour Gel

“The #1 Brand Preferred by
Maintenance Engineers”

What is DeTour Gel? - DeTour Gel is the only pest control barrier sealant in the world that's been approved by the National Sanitation Foundation for safe and effective use in restaurants, food storage, food-processing, and food preparation areas.

How Does DeTour Gel Work? - DeTour Gel creates a virtual barrier that seals out everything!

What Separates DeTour Gel from the Competition? - With over twelve years of real-world testing and refinement, DeTour Gel provides the following unique benefits:

- **Battle-Tested Worldwide:** DeTour Gel has already been used worldwide and at site-specific States in America for over 10 years. When nothing else works, pest control professionals turn to DeTour Gel.
- **All-Weather Formula:** DeTour Gel is specially formulated so it will not melt or freeze. It will retain its viscosity or “stickiness” regardless of the climate. Thus, DeTour Gel has already been proven to work effectively in the most challenging situations.
- **100% Non-Toxic:** DeTour Gel is a true “Green” or “Bio-Friendly” product. It does not contaminate the Earth’s groundwater and cause 2nd generation toxicity problems for plants and animals.
- **Long-Lasting Protection:** DeTour Gel has been shown to last up to one year in the outdoors and up to three years indoors when applied on non-porous surfaces as directed.
- **Reported Side-Effects:** International pest control operators and site specific States already use DeTour Gel as a barrier sealant in restaurants when traditional chemicals and trapping fail to work effectively.

According to experts in the industry, DeTour Gel has proved itself to be the most effective and versatile pest control product on the market today. With absolutely zero negative side-effects to the environment, groundwater, plant life, birds, and animals, DeTour Gel also has no equal when it comes to total pest control safety.
