

CHRIS ACOSTA: A PROFESSIONAL OPINION OF DETOUR GEL

It's not every day a product comes along that truly revolutionizes the pest control industry.

The last product that really changed things were the gel baits for cockroaches. When they came out, several pest control operators thought it was merely a gimmick and were reluctant to use them.

Now, of course, the past 10-15 years proved that these products not only work but are more effective than a lot of the traditional liquid chemical treatments.

Over the past decade there has been a big push towards using organic, or "green," materials. And usually, to the pest control operator, "green" means it doesn't work. And so, it's been quite a challenge. There are essential oil products, but they have limited efficiency. They smell terribly bad and are quite expensive.

We understand that many pest control operators may be reluctant to try something that is non-toxic. But the reality is that we, as a society, are more concerned about contamination; ground contamination, the contamination of our streams, and a lot of these materials are being pulled from the shelves, especially in the state of California, because they're finding too much of it in the soil or our groundwater. Such is the case with Fipronil products.

So, what can you do?

Detour Gel is not a gimmick. It's been around for over 10 years. You probably know its sister product, PIGNX Bio-Repellent Bird Gel. It has been proven effective in situations around the globe. It's been used in high-profile structures, such as Dodger's Stadium and Los Angeles' MTA Services, and across the country in food processing plants throughout New Jersey and Maryland. It's also being used in other countries like Dubai, the Philippines, and Indonesia.

The bottom line is this: Detour Gel is one product that replaces several and it can be placed where no other pesticides can go.

When was the last time you were allowed to spray pesticides in a food production facility while food was being produced? And how about "organic" facilities that don't allow you to use rodenticides at all?

Detour Gel is the perfect replacement for poison bait. Simply put it in the runways of your bait stations and use it with Detex Blox as an attractant. Rodents will enter, get the Detour Gel on their body, and the process of eliminating these nasty pests begins!

DeTour Gel

The Ultimate Pest Control Solution
Battle-Tested | 100% Non-Toxic | Ultra-Safe
