If unsure whether or not the mix is in solution or suspension, always perform a glass jar test by taking a sample of the mix with a glass jar when it's believed to be in solution and let set 24-48 hrs. If the product falls to the bottom the mix is NOT in solution and must be mixed longer or by adding hot water.

- 1) All values calculated using Reverse Osmosis water. Agitate center of container to avoid clumping.
- 2) Not responsible for clogged filters, emitters, or irrigation lines due to improper mixing.
- 3) For better results use a transfer pump with a filter to a new tank and always make sure to clean tanks and lines after every feeding.
