BIG PERFORMANCE, SMALL SIZE!

The Branick 5300 Tire Spreader was designed to give you huge abilities without a huge price. Low profile tires are easy, Super Singles are a breeze. The air powered tire lift puts them all right on the zinc plated rollers and the lock pin adjusting air powered spread arms ensure the right fit. The rubberized high-brightness LED light is mounted on a flexible arm making inspection and repair easier. The 5300 has a compact design to maximize floor space and the tire lift locks upright for storage. The 5300 is strong enough to handle even tough shops but gentle on backs with a 31" working height. If you're in the market for a spreader, this is the one you need. Made in the U.S.A. at Branick's manufacturing facility in Fargo, ND!
