

Hulasol

CARE AND MAINTENANCE

## CLEANING

---

### Canopy and cover

- Clean the Hulasol canopy and cover using lukewarm water and a PH-neutral mild detergent.
- Wipe carefully using a soft brush. Never use a high-pressure washer to clean the Hulasol canopy.

### Frame and base

Clean the frame and base with a soft damp cloth.

### Hostile environment

With intensive usage of the products in a hostile (sea, sand, chlorine, ...) environment, we advise that you regularly (1x/quarter) rinse the canopy, frame and base using fresh water to prevent the build-up of salt residue.

## SMART USE

---

### Water

Always unplug the 230V (or 120V) plug before connecting/releasing other connectors and cover the connectors with the protective hoods to prevent ingress of water or dust.

### Wind

We advise to always close the Hulasol whenever wind speeds exceed 50 km/h or 31 mph (6 Beaufort).

## STORAGE

---

### Canopy and cover

Never place the cover on the Hulasol when it's wet, this causes mildew.

### Battery pack

- Waterproof cover is included for safe storage when battery is stored or charged indoor.
- We advise to store the battery at a temperature between 10 and 20°C (between 50 and 68°F) and fully charged.
