

## **Registering Browan Sensors on Your Network**

Customers using Browan sensors on the vast majority of 1.0.x LoRaWAN networks and Helium's network should use the "NwkKey" provided with the sensor as the "AppKey".

This is because Browan sensors come with a LoRaWAN 1.1.x compatible stack.

The "AppKey" should only be used when using the sensor is being registered on a 1.1.x network.

Sensor incorrectly registered with the "Appkey" on a 1.0.x network will not be able to successfully join.

If you run into this problem, please update the registration to use the provided "NwkKey".
