Finding a 7" aftermarket LED Headlight that will fit the Suzuki adapter.

When looking for an aftermarket headlight there are a few criteria that need to be met for this adapter to work. No matter if the LED headlight is on the cheap or expensive side most aftermarket lights are made for Harley Davidson bikes and will adhere to these criteria.

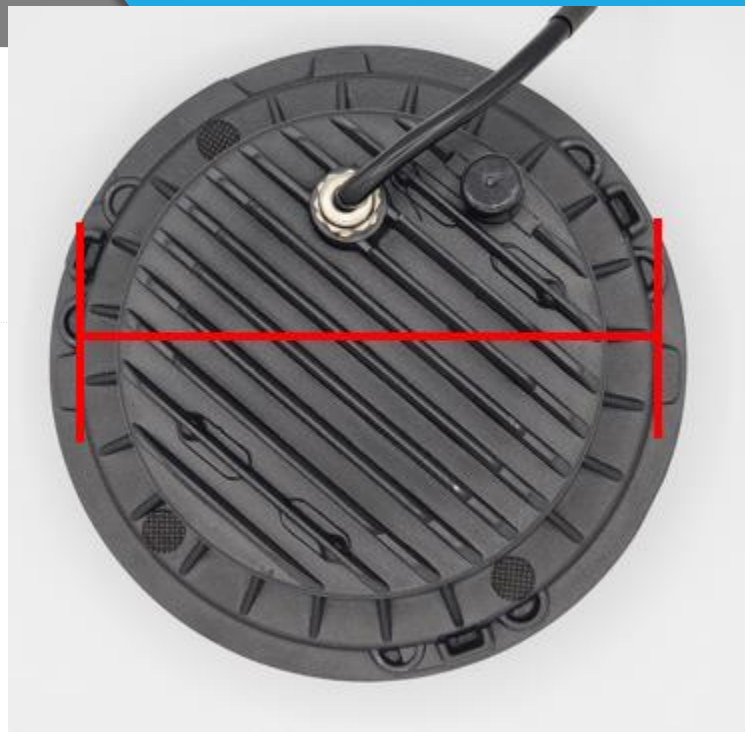

Criteria 1:

The aftermarket headlight is 7" [inch]. This is the size that will fit in the adapter.

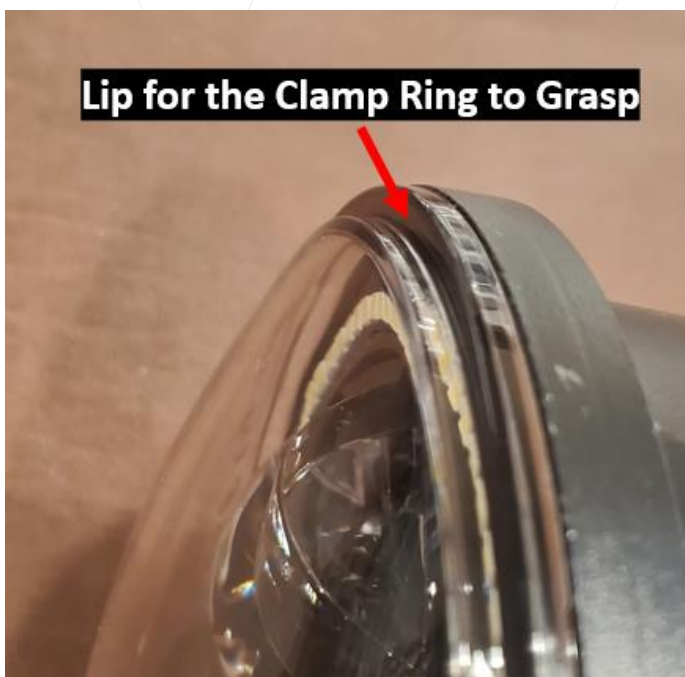

Criteria 2:

There must be three small square keys located on the back of the LED headlight. They will be spaced around the light equally but offset from the center line.

Criteria 3:

This dimension should be now more than 160mm in diameter. Most Hogworkz Lights do not fit this criterion and will require modification to the adapter.

Criteria 4:

There must be a lip on the front of the LED headlight that the adapter will clamp to. This lip is usually part of the clear lens and is on the outskirts of the light. The use of the right style headlight can still work but will require longer clamping screws to work.
