

## BS23™ WET/DRY/WET (3-AMP\*\*) SPLITTER

\*\* Fitting the SPLIT OUT with an optional isolation transformer allows the BS23™ to feed 3 amps.

*The Delay pedals must be powered from different wall-wart power adapters or a pedalboard power supply's outputs than the BS23™ and all of the other pedals feeding the center (dry) amplifier. Otherwise, a ground loop will be created, resulting in unwanted hum and noise.*
