

GROUND-LOOP ELIMINATOR (AND PHASE INVERTER)

The ideal location for the IsoPlus™ is close to the backline amplifier and its input requires a buffered instrument level guitar signal, i.e. a pedalboard with either an always on last pedal, a Compatt/O™ Buffer, or a Compatt/X™ Unity+™. When using standard 1/4" TS (tip-sleeve) instrument cables — always aim for the best quality and shortest length possible.
