

PAT BASIC®

PEDIATRIC AUSCULTATION TRAINER

The **PAT BASIC** trainer engages the technology of the SimScope® stethoscope to simulate pediatric heart, lung, and bowel sounds utilizing a large sounds library. Using the provided SimScope stethoscope, users are able to access a large variety of pathological conditions in order to customize scenarios. By placing the SimScope over the anatomically correct locations of PAT BASIC, the programmed sounds will be played through the scope, allowing for students to employ and enhance their diagnostic skills.

The optional SimScope WiFi upgrade enables wireless communication between the SimScope and PAT BASIC trainer, allowing users to change sounds remotely or to use in conjunction with a scenario-based simulation.

PAT BASIC Catalog # 718-8835 (Light skin) 718-8837 (Dark skin)
Technical Support: Unlimited
Warranty: One year – parts and labor
