

## The practicality of the ETXY anatomical base for training in diagnostic and surgical hysteroscopy

Develop your skills in diagnostic hysteroscopy and practice surgical interventions such as myomectomy, polypectomy, ablation, and more.

The model accompanies artificial uteri made of Neoderma, with pathologies. Allows training in the choice of conduct in various diagnosis, as well as it performs resection of the endometrium with complications such as bleeding and uterine perforation.

The ETXY-Hystero simulator is easy to assemble, allowing from a simple specular examination to the most complicated diagnosis found inside a uterus.

*The multifunctional base of this simulator can also be used for proctology and endourology, with the exchange of its surgical units made of Neoderma.*

### Components and spare parts:

#### ETXY-0

Reusable anatomical base,  
made of fiberglass  
Code 373

#### ETXY-1

Artificial vagina for  
resectoscopy  
Code 374

#### ETXY-2

Artificial vagina for  
hysteroscopy  
Code 375

#### ETH9

Artificial uterus for resection  
with biological implant

#### ETH7

Artificial uterus for diagnosis  
(Various pathologies to chose from)
