

Ultra 20 Advanced Rejuvenation Crème

Indications:

- To stimulate the exfoliation cycle.
- To relieve the visual signs of dry skin and the ravages of aging.
- To relieve symptoms of callused skin.
- Refines fine lines, crows feet, wrinkles and stretch marks.

Key Features:

- Gently exfoliates and accelerates body's ability to do so.
- A complete body and facial crème to improve skin texture and tone.
- Great daily maintenance after light chemical peel or just for touch up control.
- For most skin types, from flawless to problem skin, including acne-prone.
- This product has shown a reversal in basal cell atypia and more uniform melanin pattern.
- Discoloration.
- Improves the normal color of the skin by bringing blood cells closer to the surface.
- 20% glycolic concentration in a non-buffered crème.
- Upgrade after 12 months of Ultra 8 Crème or Ultra 15 Lotion. Offers significantly more Glycolic Acid than the beginner and intermediate-based products. The skin needs to be prepared for this increase in strength.
- Glycolic Acid in a non-buffered state has shown a significant increase in squamous cell turnover along with thicker, less fragmented elastic fibers at 12% concentration or higher.
- Glycolic Acid in a non-buffered state indicates a significant increase in collagen deposition as compared to 10% concentration or less.
- This is not a moisturizing cream. Glycolic Acid is not a moisturizer; it is an irritant to accelerate exfoliation.

Directions:

- Cleanse area to be treated with a very mild or proper cleanser for your skin condition.
- Pat dry lightly and wait 5 minutes. FACE: 1 green pea size for each side of the face, 1 green pea size for the neck. Apply thinly and evenly to affected areas. Allow to dry.
- Daytime: Apply sunscreen at least 30 minutes prior to getting into sunlight for best results.
- Bedtime: A moisturizer may be applied after crème has dried.

Warnings:

- Stop usage if pregnant or breastfeeding.
- For external use only. Avoid contact with eyes and mucous membranes.
- Keep out of reach of small children. Not recommended for children under 12 without doctor supervision.
- A mild transient tingling may occur in people with sensitive skin; this is normal. If tingling sensation continues or irritation develops, discontinue use and consult a physician.
- Do not use an alcohol-based astringent when using this product, it may be too drying.
- When having professional Glycolic Peels or Microdermabrasion, discontinue use 48 hours before and after treatments. Do not use until 48 hours following treatment.
- If having laser treatments discontinue use of this product until 28 days following completion of your treatment.
- Not recommended if you have sensitive skin, or facial issues including eczema, psoriasis, or rosacea.
