

HOW TO CHARGE PWR DUALY BATTERY

1. Plug the wall outlet cable into the power converter box. [Figure 1]
2. Plug the round pin connector into the battery.
 - a. When the battery is on the bike, the charging port is on the right-hand side of the battery.
 - b. You will need to pop open the rubber cover that protects the charging port to plug in the charging cable. [Figure 2]
 - c. You can charge the battery when it is on or off the bike.
 - d. Once the charging port is open, plug in the charging cable to the battery. [Figure 3]
3. Plug the charger into your wall outlet or power source. [Figure 4]
4. While the battery is charging the indicator light on the converter box will show a red light. [Figure 5]
5. When the battery is fully charged the converter box will show a green light. [Figure 6]
 - a. Charging time will vary. Typical charge time for a battery to go from fully depleted to fully charged is 4-6 hours.
6. When your battery is fully charged unplug the charger from the wall outlet or power source.
7. Once the charger is unplugged, you can remove the charging cable from the battery.
8. Close the rubber charging port cover on the battery to protect the charging port.

BATTERY TIPS

- If you are going to store your bike for a long period of time it is recommended to remove the battery from the bike.
- If you are storing your bike for a long period of time you'll want to charge the battery at least once every 30 days to keep the battery in proper working order.
- When transporting your bike on a bike rack on a vehicle it is recommended to remove the battery from the bike.
- Do not submerge the battery in water or ride the bike in excessively wet conditions.
- If you live in a region that gets colder weather and store your bike in an unheated garage or shed, it is recommended you store the battery indoors to optimize battery life.
- Never leave a charging battery unattended!
