

## Tear-Drop Mount Installation and Cabinet Hanging Instructions

How To Videos available at [www.youtube.com/sfdisplay](http://www.youtube.com/sfdisplay)

**PARTS:** 1 packet of mounting hardware:  
L & R tear-drop L shaped brackets, 8 small screws, 2 wall anchors, 2 large screws, and a set of keys

**Step 1:** Decide if you will be hanging the display case vertically or horizontally.

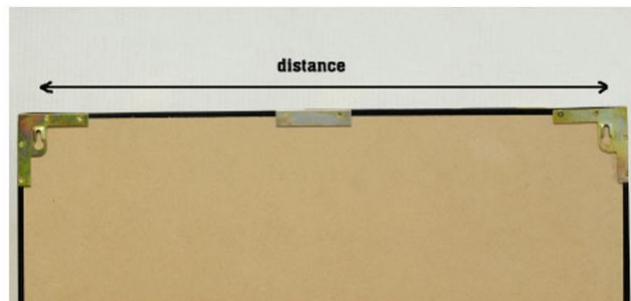

vertical

horizontal

**Step 2:** Install the left and right Tear-Drop brackets to the top corners of the back of the cabinet with the provided 8 small brass screws, see photos below. There are pre-drilled holes to match the bracket holes.

**Step 3:** With a measuring tool, measure the distance between the 2 holes of the left and right Tear-Drop brackets. After locating where you will be displaying the cabinet, measure out the same recorded distance onto the wall. It is important that your measurement is accurate as this will make the attachment easier to align. Into the wall, install the 2 large black screws. Use the 2 plastic hollow wall anchors if your wall material requires.

**Step 4:** To hang the cabinet on the wall, simply position the cabinet over the top 2 screws and align with the holes of the Tear-Drop brackets. Slide down the case and rest it on the brackets.
