Heavy Duty Wall Mounting Kit for Display Case Installation Instructions
### How To Videos available at www.youtube.com/sfdisplay

Our larger cabinets for heavier items use the heavy-duty hanging kit.

- 2 Large L-shaped metal brackets
- 6 Plastic hollow wall anchors
- 6 Large metal screws
- 2 Large Tear-Drop brackets (installed on cabinet back)

Step 1: Install wall screws for the Tear-Drop brackets.

With a measuring tool, measure the distance between the two holes of the left and right Tear-Drop brackets. Measure out the same recorded distance onto the wall where you will be hanging the display case.

Install mount with 2 large screws and 2 plastic hollow wall anchors if you require additional support.

Step 2: Install the two L-shaped metal brackets for bottom support.

With the cabinet hung on the 2 screws, mark where the bottom of the cabinet is. Then, remove the cabinet to install the two L-shaped metal brackets that will be used to support the cabinet.

The metal brackets should be installed with about 4" of space from each end of the cabinet. For example, if you have a cabinet with a width of 26", then the brackets should be 18" apart.

If you have hollow walls, then use 4 of the provided plastic hollow wall anchors and 4 large metal screws.

Step 3: Final Installation

Now that you have the entire mounting ready, just position the cabinet over the top two screws and align with the holes of the Tear-Drop brackets. Slide the case down and have it rest on the Tear-Drop brackets and L-shaped brackets.
