

# Folding Guidelines

Always pack away completely bone dry. If you have to take your tent home damp, then be sure to open it out at home and air it within 48hrs max.

1. Start with the roof....

2.

3.

4.

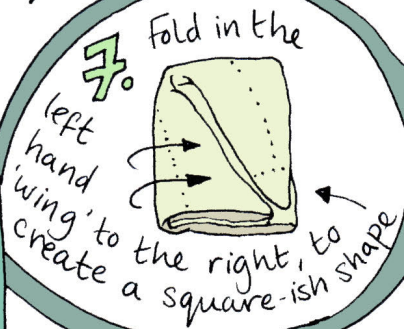

5.

6.

7.

8.

9.

## Now for the walls....

1. Tip: fold your walls on top of your groundsheet to keep it clean.

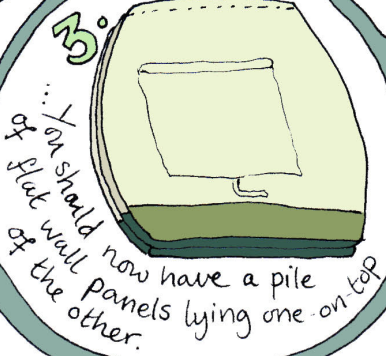

Remove all the poles (unless using a banana bag), unclip or un-velcro from the groundsheet, then lie down flat on to it's side.

2.

Wall continued....

3. ... you should now have a pile of flat wall panels lying one on top of the other.

4. Starting from the velcro edge, roll up like a sausage.

5. Flatten with your knees to squeeze out the air.

And finally the groundsheet...

1. Fold in half...

2. Then in to quarters...

3. Then fold back on itself, leaving an overlap. So that this width here is about the same length of as your tent bag.

4. Fold the flap back on itself so that you have a long rectangle of folded fabric.

5. Fold the long rectangle in to a flat roll, by turning it over on itself in roughly 30cm folds.

Before putting it all away...

Clean all the pegs. Use a brush or water to wash off the dirt - otherwise it may cause mould.

Big bag Small bag

★ be sure to put your groundsheet into its black bag before packing
