

in your bag(s) you will find:

1x peg hammer

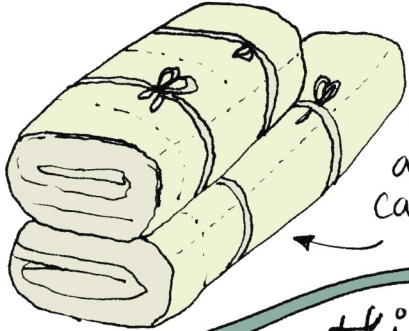

12x smooth steel groundsheet pegs.

10x short guy lines with wooden toggles (for the roof).

10x medium guy lines (for the lower wall loops)

10x long guy lines (for the upper wall loops)

+ 350gsm Wall canvas and roof canvas

540gsm PVC groundsheet.

Thank you for buying a beautiful Lotus Belle tent

20x Super strong, threaded guy line pegs.

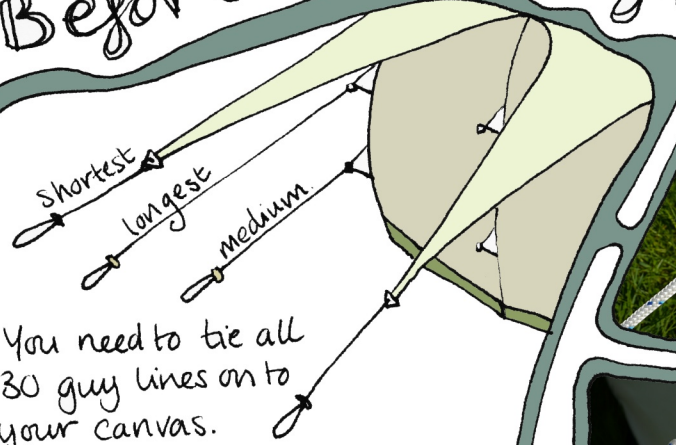

1x wooden centre pole in 3 sections

1x pole coaster

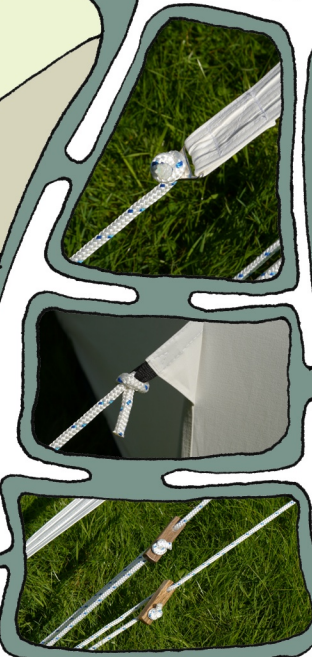

10x curved steel poles.

Before setting up your tent the first time:

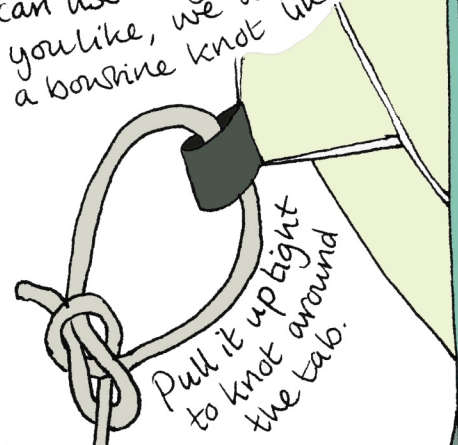

You need to tie all 30 guy lines on to your canvas.

Open out both canvas sections, the roof canvas is more obvious, with 10 tentacles each with a metal tab at the end. The wall has a velcro strip on the top edge, and a green PVC strip on the lower edge.

You can use any type of knot you like, we would recommend a bowline knot like this:

Pull it up tight to knot around the tab.

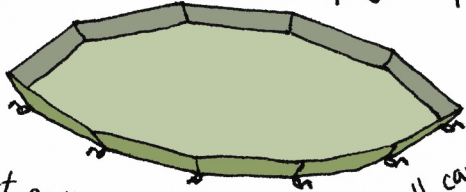

For step by step video instructions try howcast.com search 'bowline'

NB: Leave the guy lines on when you pack your tent away, check they are dry & clean.

How To Put up your tent.....

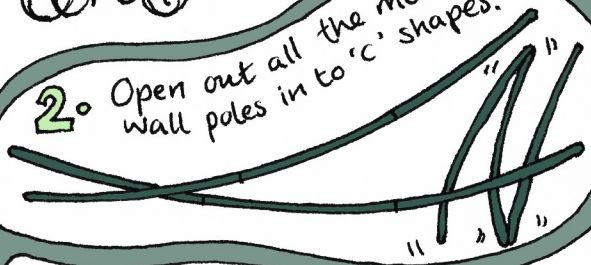

1. Spread out the groundsheet. Peg down through the black elastic loops on the underside. Use the smooth pegs.

10x ground sheet pegs. 

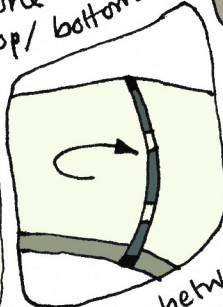

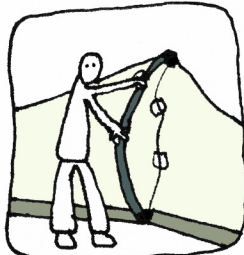

Tip: don't pull too far out, or the wall canvas won't fit.

2. Open out all the metal wall poles in to 'c' shapes.

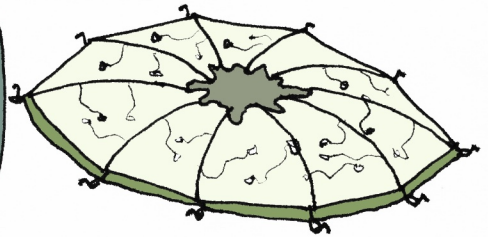

3. Insert the wall poles, one at a time into the black pockets at the top/ bottom of the wall canvas.

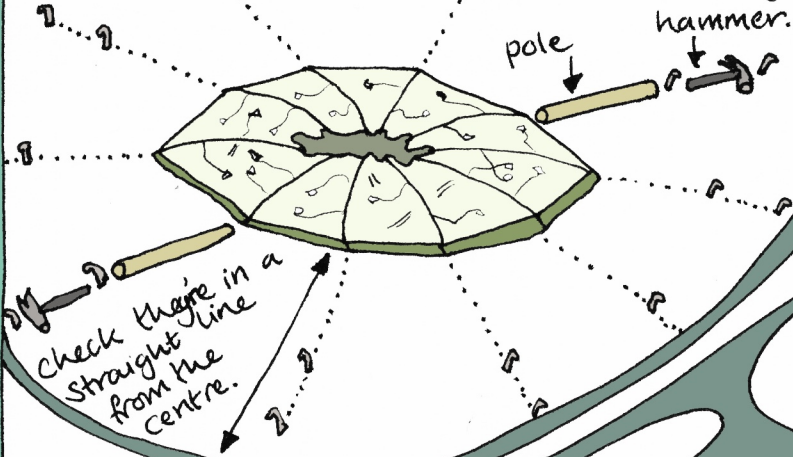

Pull/twist the pole around until it fits between the wall canvas, close the velcro straps, secure in place.

4. Spread the wall out flat on top of the groundsheet. Hook the loops at the base of the wall on to the groundsheet pegs.

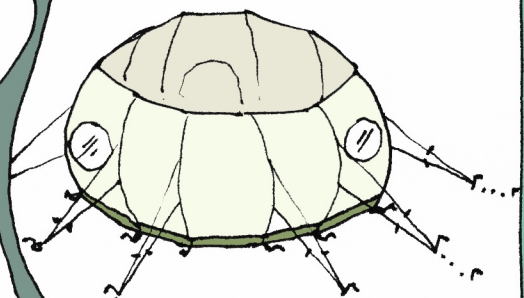

Tip: Sometimes it helps to turn the pegs to get the loops on...

5. Place the 20x strong threaded guyline pegs in 2 big rings around the tent. Use one section of your centre pole as a guide for the first ring, and your hammer as a guide for the second ring.

6. Pull the wall guy lines out to the first ring of pegs.

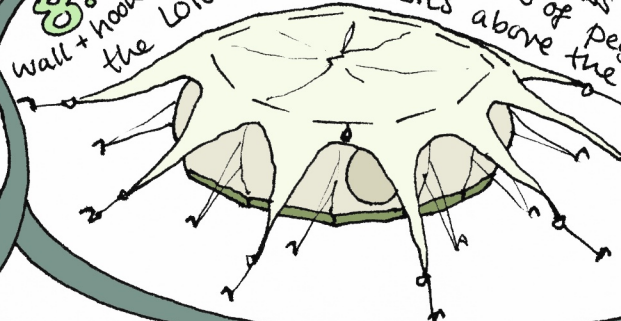

* put both guy lines on the same peg.

7. Go inside the tent. Hook the groundsheet up onto the wall loops - you will find the loops about 25cm up from the floor on the seam of the canvas wall panel.

8. Take the roof inside the tent. Pass the ends over the wall + hook loosely on to the second row of pegs. the LOTUS BELLE logo sits above the doorway. * Make sure the arch is slightly higher here.

Instructions Continued...

9.

Fit the three sections of the centre pole together

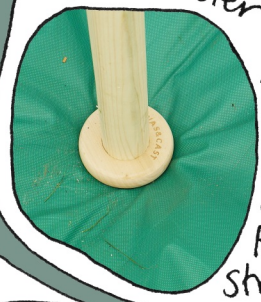

10.

Take the centre pole inside the tent and stand it upright.

11.

Slide the pole under the roaster under the centre pole + check pole is straight.

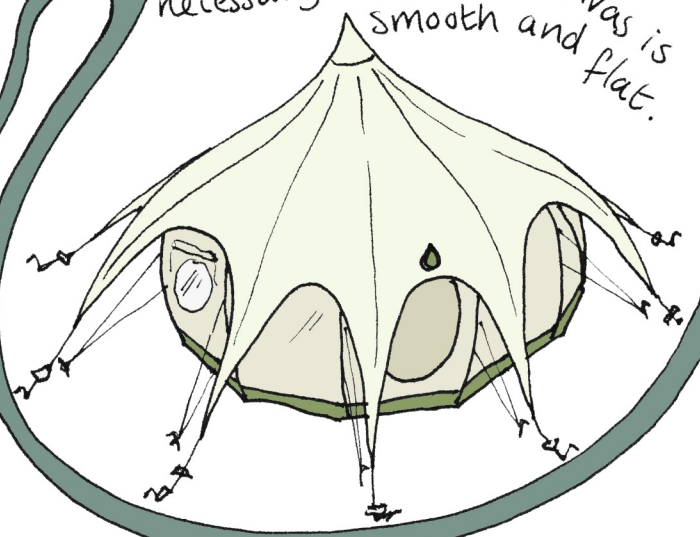

12.

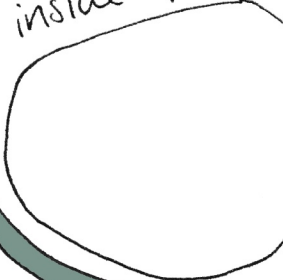

Whilst the roof is still loose, go around the inside of the tent doing up the velcro strip which joins the roof to the walls. NB: This strip is NOT a vent - the roof is supposed to lie flat touching the wall, this strip is designed to create a seal between the canvas sections.

13.

Nearly done! To finish off, go back outside & adjust the guy ropes as necessary until the canvas is smooth and flat.

14. Outback & Deluxe models only: On the inside of the tent, velcro close the flap between ground-sheet + walls.

FINISHED! Now for the fun part, make it your own!

....Make it your home!

★ For a super luxury experience, why not add an awning and inner tent? Or even a woodburning stove? ★
