Do the twist with garlic

Last week I visited the Christmas shows, where shops exhibit the new products they think will be a festive hit. Though pretty low-tech, I loved the Garlic Twist and bought one on Amazon straight afterwards. I wish I'd found it years ago.

The Garlic Twist is a simple device that eliminates the most annoying aspect of using a traditional garlic press: most of what you crush seems to get left behind inside the gadget.

The Garlic Twist consists of two pieces of hard, see-through plastic with a row of very sharp teeth inside.

You simply peel the garlic cloves, put them into it, twist a few times and are left with perfectly minced garlic with zero waste. If you cook a lot with garlic, this is a game-changer.

The Garlic Twist — which also works well on chillies and ginger, is available on Amazon or at independent retailers.
