The Best Device for Insomnia & Chronic Pain

The Fisher Wallace Stimulator® is a medical device used to treat insomnia and chronic pain by safely stimulating the brain's production of neurotransmitters required for healthy mood and sleep.

Approved by Health Canada, it has been on the market since 1991 without causing any serious side effects and is more effective than most medications in published clinical trials.

Key Facts

✔ Proven safe and effective in over 20 published studies that were double-blinded and placebo-controlled.

✔ Recommended by over 2000 board certified psychiatrists, including doctors at Harvard, NYU and Cornell affiliated hospitals.

✔ Recommended usage: Twice per day for 20 minutes on level 2 (once in the morning and once before bed).

✔ Patients typically see results within the first 2-4 weeks. If there is no improvement after 2 weeks, patients can increase dosage from level 2 to level 4 as indicated in the instructions. If the patient does not experience any benefit, he/she may return the device for a refund within 30 days of receipt.

✔ The device causes no serious side effects and has no long term negative effects. One out of 400 patients may experience a mild headache or dizziness, or feel energized. The device may mildly stimulate the optic nerve, causing the patient to see flashing lights on the periphery of his / her vision - this is normal and poses no risk.

Patients who should NOT use this device: Patients who have an implanted medical device in their head (such as a deep brain stimulator). This is the only contraindication when our device is used cranially. Patients with pacemakers should not use the device below the head to treat pain.
