

STOCK FRAGRANCE

professional fragrance oil blends

EDP @ 25%

INGREDIENT	%	CAS NUMBER
Alcohol 40B	66.63	000064-17-5
Fragrance (parfum)	25.00	Mixture
Water (aqua)	8.370	007732-18-5

Instructions:

1. The fragrance oil should be aged for 2 days.
2. Into a suitable stainless steel vessel, equipped with propeller agitation, add the Fragrance oil.
3. Add the Ethyl Alcohol and De-ionized water. Cover the vessel to prevent evaporation. Commence brisk mixing.
4. Mix for a minimum of one (1) to four (4) hours depending on the batch size. After the required mixing time, the solution should be uniform.
5. Seal the vessel and age the batch for a minimum of three (3) days. Upon completion of the aging cycle, chill and re-circulate through the filtration unit until desired temperature generally, 0-5°C. This will take approximately 6-12 hours depending on batch size and starting temperatures.
6. Add 0.5 -1.0 micron cartridge to filtration unit (or equivalent).
7. Filter through the filtration system, maintaining the batch temperature at 0-5°C during filtration.
8. Submit to QC for approval prior to filling.
