

DR. WACK
Premium-Pflege

Product-Information

The Problem:

Hot brake dust can burn into metal, paintwork, chrome, etc. surfaces on car parts and result in flash rust. Rust can also be caused by road salt and moisture. This adversely affects the value and also the look of the car and, if nothing is done about it, this can also lead to ongoing corrosion.

The Solution:

Flash Rust Remover

Product Advantages:

Removes flash rust quickly and by itself – kind to the material

- Eliminates flash rust, the first signs of corrosion and industrial dust
- Acid-free – will not damage materials
- Suitable for all surfaces such as paint, plastic or metal
- With gel formula – does not drip off, optimal penetration
- The effect indicator lets you know when to rinse off

Applications:

For all surfaces such as paint, plastic or metal (check for compatibility beforehand on bare aluminium).

How to apply:

Spray the A1 Flash Rust Remover onto a cleaned surface, leave for five minutes, then wipe clean with a wet sponge. Rinse surface thoroughly with water and wipe with a chamois cloth.

Tip:

After use, we recommend that you seal painted surfaces with A1 Speed Wax Plus 3.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
