

The problem:

Belt drives are becoming increasingly popular. It is a matter of fact that bicycle belts pose a highly sensitive form of drive compared to chains, which makes a regular care indispensable to prevent problems such as embrittlement and fading.

The solution:

NEW!

F100
BELT-CARE

Product advantages:

Significantly extends the belt life span

- Dynamic protective film
- High water repellency
- Low dirt adhesion
- Increases the softness
- Enhances the smoothness of running
- Significantly extends the life of the belt

Application areas:

Inner and side surfaces of the toothed belt

Application:

Shake intensively before use. Spray onto the inner and side surfaces of the belt and allow to flash off for 5 min.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
