

The problem:

Cyclists who want the area around the chain to look perfect visually while enabling perfectly smooth running at the same time use dry lubricants. However, the dry lubricants currently available only provide a largely below-average lubricating performance and reveal weaknesses in their wear or corrosion protection.

The solution:

BIO
F100[®]
Bio
Dry Lube

For the love of nature:

- Bio-based lubricant in accordance with DIN EN 16807:2016
- Highly biodegradable according to standard: OECD 301(F)
- Without fragrances and colourants
- Bottle is made of environmentally friendly recyclable material

Product advantages:

Ensures perfectly smooth running and a clean chain

- Reduces friction, ensures excellent freedom of movement by all moving parts
- Layers itself as a dry and yet flexible protective layer on chainring, sprocket and bicycle chain
- Optimum protection against wear and corrosion
- Absolutely no spinning off
- Dirt- and water-repellent
- Tremendous creep performance

Application areas:

For the bicycle chain, control cables etc.

Application:

Shake the bottle before use. Apply thinly and evenly onto the inside of the clean, dry bicycle chain and allow to dry for at least 60 minutes.

Please note: Before use, clean bicycle chain with F100 Bio Chain Cleaner. Do not use on brake discs, brake pads and tyres.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
