

The problem:

There is constant friction between the chain and the sprocket while riding, as well as between the chain links. This loosens fine metal abrasion and the chain inevitably gets dirty. Together with residues from chain lubricants, sand, road dirt, etc., a stubborn deposit forms on the chain and sprocket, which extremely accelerates wear. A new Lubrication becomes increasingly ineffective as the lubricants can no longer penetrate the chain.

The solution:

NEW!

CHAIN BRUSH

Product advantages:

Eliminates the heaviest dirt on the entire drive

- Supports cleaning with F100 Chain Cleaner and F100 Bio Chain Cleaner
- Removes strongly adhering dirt particles
- Reliably cleans the entire drive train
- Distributes the cleaner evenly
- Different brush heads allow cleaning of all parts of the drivetrain
- Resistant bristles

Application areas:

For the bicycle chain, chain rings, gear, rim etc.

Application:

Apply F100 Chain Cleaner or F100 Bio Chain Cleaner. Then clean the treated areas thoroughly with the brush. Then rinse off the cleaner with a strong jet of water.

Note: After cleaning, lubricate the chain with chain oil.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
