

The Problem:

Contamination / dirt on the paint can cause scratches during the shampoo wash (hand wash). We recommend using the F100 Power Bike Shampoo as a pre-cleaner with a foam sprayer or foam lance and for subsequent cleaning as a shampoo.

The Solution:

POWER BIKE SHAMPOO

Product Advantages:

NEW FOAM TECHNOLOGY: Dynamic changes to the foam bubbles ensure a micro-mechanical cleaning effect. This loosens the dirt from the surface actively, binds it to the foam and removes it from the surface.

- Very gentle on all surfaces
- Does not remove wax and sealing coats
- Suitable for all surfaces
- Biodegradable

Application Areas:

The complete bicycle including chain

Application:

Rinse coarse dirt off with a large amount of water.

- **Using the foam hose (pressure washer):** Fill the product into the tank undiluted
- **Using the foam sprayer:** Add 1.5 to 2 caps (one cap = 30 ml) to 1 L water. Apply the foam to the vehicle and wait 2 to 3 minutes for it to take effect. Then rinse thoroughly with clean water
- **Using as a shampoo (hand wash):** Place 2 to 3 caps to a bucket and add 5 L water to foam it up. Wash the vehicle from top to bottom using a car wash mitt (we recommend F100 Wash Mitt – Premium Microfiber) or a cleaning sponge. Then rinse thoroughly with clean water and dry the vehicle.

Note: Do not use in direct sunlight or on hot paint. Do not allow the foam or washing fluid to dry on the vehicle. Store the bottle in a frost-protected place.

RECOMMENDED ACCESSORY:
F100 Wash Mitt – Premium Microfiber

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
