

The Problem:

Adverse weather effects such as rain and dirt cause corrosion on the bicycle's sensitive surfaces. This has a detrimental effect on function, value and appearance. Few people know that reliable and effective protection is available.

The Solution:

Bicycle Protection Oil

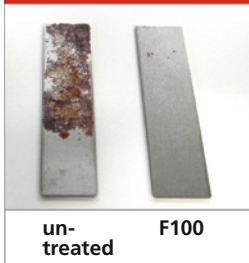

Product Advantages:

Corrosion protection, cleaning, shine and care

- With regular use, it reliably protects all metal parts from corrosion and stops existing corrosion
- Its good penetrating properties means that it also reaches difficult-to-access places
- Forms a transparent protective film against harmful environmental influences which seals immediately after touching
- Gentle cleaning and maintenance
- Very suitable as preparation for winter inactivity
- Suitable for varnish, rubber and plastic

Corrosion test after 5 months

Application Areas:

For all surfaces made from metal, plastic, carbon (e.g. frame and attachment parts)

Application:

Shake can before use. Use product on clean and dry surfaces only. Spray product evenly and sparingly and wipe with soft cloth or apply using cloth soaked in product. To prepare bike for winter inactivity, spray on generously (do not wipe afterwards).

Please note: Do not spray onto hot surfaces! Do not spray onto brake discs and brake pads or onto tyre treads (risk of accident)!

Tip:

Product can easily be removed using F100 Bicycle-Cleaner.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
