Premium Care

Product Information

The Problem:

Most convertible tops consists of a triple-layer top material with a cotton lining for the inner roof liner, an intermediate rubber layer and a top outer layer made of plastic materials, such as PVC, acrylic, polyacrylonitrile or – in most cases – a cotton blended fabric. The upper layers mentioned above are prone to persistent soiling that is hard to remove as the surfaces are rough and soft. However, the cleaner must act very carefully on the material, even in case of the most persistent dirt, because the most soft tops only have a very poor abrasion resistance and the surface structure as well as the color depth can be damaged. Therefore, a convertible soft top must be cleaned thoroughly, while at the same time preserving the surface.

The Solution:

CONVERTIBLE SOFT TOP CLEANER

Product Advantages:

THE power foam - Intensive and gentle

- Cleans deeply, yet does not harm the soft top
- Does not attack the original impregnation
- Absorbs the dirt and binds it with the foams
- Allows for extended residence times as the foam does not run off even on sloped soft top surfaces
- Precision application allows the cleaning of individual spots and soiling areas
- Cleaning has a touch-up effect on soft top colors
- Extremely high-yielding: 8 -12 applications at complete surface foaming as opposed to 2 - 6 applications for conventional products
- Suitable for all soft tops

Application Areas:

For all textile convertible soft tops (plastic, cloth, acrylic, Dralon, leather)

Application:

Moisten the soft top with water and rinse of coarse dirt. Shake the can well before use. Spray the A1 Convertible Soft Top Cleaner on the soiled surface. In case of persistent contamination let the foam react for 5 minutes. Clean the soft top with soft and moistened sponge. Rinse the sponge with clear water in between. Finally, rinse the soft top thoroughly with clear water. Repeat this procedure, if required.

Recommendation:

- After the soft top has dried, treat vinyl soft tops preferably with A1 Plastic Protectant and fabric soft tops with A1 Convertible Soft Top Proofer
- The A1 Speed Polish removes scratches and blind spots from the plastic rear window. Thus ensures safe visibility again

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
