

The Problem:

Convertible soft tops are highly exposed to weather conditions, i.e. environmental impacts, like rain, wind and sun frequently afflict the soft top, compromising the water-repellent effect and causing the soft top to bleach. In addition, persistent dirt can stick to the so-called upper layers of the soft top, which is hard to remove because of the rough and soft surface. Each intensive mechanical cleaning can afflict the material.

The Solution:

CONVERTIBLE SOFT TOP PROOFER

UNTREATED

TREATED WITH

Product Advantages:

Superior wetness protection - With UV protection - Extremely long-lasting effect

- Superior wetness protection for all convertible textile tops
- Extremely long lasting effect
- Includes UV protection, avoids bleaching
- Prevents soaking and ensures faster drying of the soft top
- Stain free
- Water-, oil- and dirt-repellent

Application Areas:

Suitable for all textile convertible soft tops

Application:

Clean the soft top with A1 Convertible Soft Top Cleaner and let dry thoroughly. Shake the can well before use. In a well-ventilated area, ideally outdoors, spray onto the clean surface from a distance of approx. 20 cm. Spray-on the product evenly from a distance of around 20 cm. Do not let the sprayed surface soak. Do not spray on glass and plastic screens or lacquer surfaces and protect such surfaces against spray. Let dry in a sun-protected place after following. Do not use in direct sunlight or on heated surfaces.

Recommendation: For vinyl tops, we recommend A1 Plastic Protectant shiny.

Note: A warming of the cover after complete drying (such as by direct sunlight) increases the impregnation effect.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
