

## The Problem:

If you use inferior gloves, there is a risk that the surface will not be cleaned optimally and gently. In addition, they do not offer optimum workmanship, are not comfortable to wear and are not durable.

## The Solution:

**Wash  
MITT**  
*Premium microfiber*

**NEW!**

## Product Advantages:

### ULTRA SOFT – The most gentle way to wash!

- **High quality microfibre:** Consists of particularly soft and high-pile microfibers that glide gently over the surface and optimally bind the dirt in the mitt.
- **Mega absorbent:** Over 500 ml of liquid is absorbed in the wash mitt
- **A perfect fit:** It is very comfortable for ease of use without a great deal of effort. Incl. non-slip elasticated cuff and middle ensure. Ideal for left and right-handed users
- **Very durable and environmentally friendly:** Lasts approx. 300 wash cycles, can be washed and tumble dried

## Application Areas:

**Suitable for all surfaces such as paint (glossy and matt), films (glossy and matt), plastic, metal, glass, polycarbonate and all types of tyres**

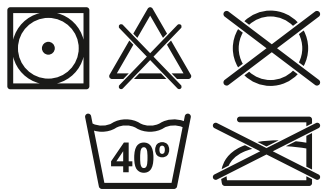

## Application:

- **Preparation:** Prior to hand washing using the wash mitt, remove coarse dirt and contamination from the vehicle and rinse with plenty of water. We recommend our A1 Power Foam Shampoo applied as foam for pre-cleaning. Ensure that the vehicle is in the shade and that the surfaces have cooled. The two-bucket method is ideal for gentle hand washing. One bucket with clean water and the second filled with water including a suitable cleaning agent (we recommend our A1 Speed Shampoo or A1 Power Foam Shampoo)
- **Soak the wash mitt:** Immerse the wash mitt in the bucket with the cleaning agent and soak up plenty of water
- **Cleaning:** Clean the vehicle with as much cleaning agent as possible from top to bottom. Rinse the mitt out in the bucket filled with clean water several times so that the dirt particles caught by the mitt are removed. This prevents scratches
- **Care:** Rinse the mitt thoroughly with water and leave to dry after each use. In order to remove all polish, wax and dirt residues, we recommend cleaning the mitt in the washing machine (see the washing instructions).

**Washing instructions:** • Machine-washable up to 40 °C without fabric softener or bleaching agents  
• Wash separately or with laundry of the same colour. When washing together with other fabrics, ideally wash in a fine mesh wash bag • We recommend using special microfibre detergents (e.g. S100 functional detergent) • Suitable for tumble-drying at low heat

**Recommendation:** Ideal in combination with our products A1 Power Foam Shampoo, A1 Speed Shampoo and A1 ALL in ONE Intensive exterior cleaner

**Material:** 100 % polyester • 800 GSM (grams / m<sup>2</sup>)

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
