 Made in Germany

Product-Information

The Problem:

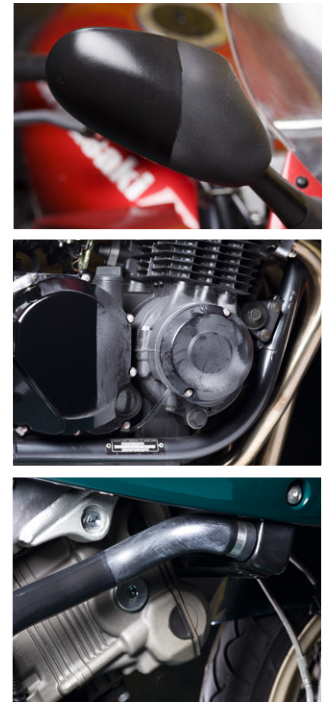

Rain, sun and street soil affect the appearance of each machine. Especially black engine parts are often exposed to bleaching, which often causes even well maintained motorcycles to quickly lose the brilliance of their black colour.

The Solution:

COLOUR REFRESHER

-TRANSPARENT-

Product Advantages:

Refreshes faded surfaces!
 e.g. greyed engine parts, plastic materials, rubber, etc.

- Refreshes bleached parts and provides colour depth and a semi gloss finish
- Heat resistant, dries stainless and is steady by rain and several motorcycle washes
- Protects from (further) fading caused by UV radiation

Applications:

Bleached metal parts, painted and unpainted plastic materials, rubber, etc.

S100 Colour Refresher serves to improve the visual appearance of:

- Greyed and bleached painted and unpainted motorbike metal parts (e.g. engine block, frame, linkage, engine side caps, rims)
- Bleached rough and painted plastic and rubber parts (e.g. side covers, inner cladding, mudguards, controls and instruments, carbon parts, top case, plastic suitcase, blinker, mirror, etc.)

How to apply:

Wash the motorbike thoroughly with S100 Total Cleaner+ and rub it dry with a leather cloth. Shake the product well and spray on sparsely and evenly from a distance of around 20cm. Let dry.

Note: Apply the product on rims, covers, instruments, etc. with a soaked cloth only in order to protect adjacent surfaces that must not be treated (tyres, seat bench, tachometer covers). Do not spray on these parts!

When treating glazed plastic parts, like e.g. covers, wipe with an absorptive cloth after having applied the product.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
