# Product-Information

## The Problem:

Leather is exposed to extreme environmental influences such as rain, sun, dirt etc. Insects, especially, stick very hard to the surface. The leather starts to look tattered and dirt penetrates into the leather's natural weave fabric. This blocks the pores and causes its breathability to suffer. Dirt also accelerates the aging of the leather, making it less comfortable to wear over time. There are many cleaning products for leather. However, most of them are liquid-based and, because of leather's absorbency, do not stay for very long on the surface to loosen the dirt for a gentle cleaning process.

## The Solution:

## LEATHER GEL CLEANER

**NEW!**

## Product Advantages:

Removes dirt and stains gently deep into the pores

- Significantly better cleaning action
- Longer time to act thanks to new gel formula
- Removes soiling such as insects with ease
- Gentle on the leather
- Optimal preparation for leather care
- Non-slip and transparent

## Applications:

For shiny and matte smooth leather (including TFL-Cool®)

## How to apply:

Spray S100 Leather Cleaner directly onto the dirt and allow it to act for approx. 1 minute. Then, using circular movements and light pressure, clean it with a sponge. Wash out the sponge at regular intervals. Next, wipe off the treated surfaces with a moist microfibre cloth.

## Tip:

After cleaning, you must re-supply the leather with nutrients and should restore the moisture protection. Products especially suitable for this are S100 Leather Balm, S100 Leather Care Matte and S100 Leather Care Gloss.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
