# Product-Information

## The Problem:

Rain, road salt, dirt, grit or even improper cleaning, for example with aggressive cleaning agents, are primary causes of blind spots, stains or traces of corrosion on motorcycle parts. These blemishes cannot be removed by merely cleaning the motorcycle. Painted parts can be relatively easily restored using polishes. Bare metal parts, such as aluminium, steel or chrome for example, require the use of special polishes because conventional polishes do not achieve the desired effect.

# METAL POLISH

**NEW!**

## Product Advantages:

### High polish for all metals parts

- Removes traces of corrosion, surface rust, blind spots and scratches
- Removes discoloration from the exhaust system
- Gives a shining mirror finish
- Can be buffed up with ease, without smearing
- No danger of polishing in new scratches

## Applications:

### All smooth, unpainted metal surfaces

## How to apply:

Clean the surfaces first. Shake the tube. Apply the polish with cotton wool, pressing hard. Then buff with a soft microfiber cloth (e.g. S100 THE CLOTH).

NOTE: Do NOT use on matte metal parts!

## Tip:

We recommend S100 Paint and Plastic Polish for treating painted metal parts.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
