

4Bond™ LIFTER™

with MOLECULAR BONDING ADDITIVES

RESULTS MAY VARY

FOR PROFESSIONAL USE ONLY. READ ALL DIRECTIONS AND CAUTIONS CAREFULLY BEFORE USE. USE ONLY AS DIRECTED.

4Bond Lifter with Molecular Bonding Additives is a high performance, delicate consistency, zero dust lightener, giving fast efficient lifting for both on-scalp and off-scalp techniques as well as with Direct Dye color removal.

IMPORTANT PRECAUTIONS:

- Examine client's scalp. If there are any cuts, scratches, abrasions or scalp is sensitive or irritated, do not proceed.
- The use of heat is not recommended. Processing time is reduced considerably when using **TCA, The Color & Lightener Accelerator** additive during service. For more information on the benefits of using **TCA**, visit: <https://dennisbernard.com/tca>
- It is recommended that the product is not left in the hair for more than 40 minutes.
- Wait at least 2 weeks before using on freshly permed hair.
- Do not use if hair has been in contact with metallic dyes, compound henna, henna or semi-permanent hair color. Wait until hair treated with these products has been cut out or semi-permanent color has washed away.
- Do not use on damaged hair.
- Do not apply any bleaching product more than once in 24 hours.
- Do not use metallic bowls or tools.
- Discard any leftover product.
- Use only with recommended manufacturers 10 volume to 40 volume developer.
- This product is designed and intended for use only by a licensed cosmetologist or professional hairdresser and carries no warranty expressed or implied if used by others.
- When opening tub, hold away from face and avoid inhaling contents.

CAUTION: Keep out of reach of children. Do not use on children. Do not inhale or ingest. When opening tub, hold away from face and avoid inhaling contents. This product contains persulfates and other ingredients, which may cause serious irritant, respiratory and/or allergic reactions. For external use only. Always wear suitable gloves. Do not use on eyelashes and eyebrows; to do so may cause blindness. Avoid contact with the eyes and skin. If contact occurs, rinse immediately with lukewarm water. If contact with the eyes occurs and contact lenses are worn, they should be removed before rinsing eyes with water. If irritation persists, get medical attention. Prepare and use in a well-ventilated area. If affected by inhalation, move to fresh air. If symptoms persist, get medical attention. If swallowed seek prompt medical attention. Induce vomiting only if recommended by a medical specialist. Do not use on broken or irritated scalp. Do not use with metallic bowls or tools. Do not use over metallic dyes. On previously colored hair a strand test is always recommended. Keep in a cool, dry place. Seal package after each use.

RESULTS MAY VARY based on type of hair, how much lift is needed, past chemical services still found in hair and what manufacturers products were used to perform these services.

INSTRUCTIONS FOR USE:

- Complete a strand test prior to use, especially on previously colored or lightened hair.
- Always wear suitable gloves.
- Mix product in a well-ventilated area.
- Development time varies depending on the level of lift required.
- For on scalp applications, do not exceed 20 volume developer. Do not use heat. Processing time is reduced considerably when using **TCA, The Color & Lightener Accelerator** additive during service. For more information on the benefits of using **TCA**, visit: <https://dennisbernard.com/tca>
- Use the scoop provided and measure the required amount of **4Bond Lifter with Molecular Bonding Additives** into a non-metallic bowl. Add recommended amount of manufacturers developer to the proper ratio of powder. Mix powder and developer into a smooth paste, bringing it to your desired working consistency.
- Process until the desired lightness is achieved, up to a maximum of 40 minutes. Do not use heat.
- When processing is complete, rinse well. Shampoo and condition using the **4Bond N' Plex Bond Building Shampoo and Conditioner**. With continued at home use, this shampoo provides luxurious, soft and shiny hair while maintaining and preparing the hair's health **BEFORE** the next color or chemical service.
- For hair requiring extra attention, the **4Bond Molecular Bonding Complex Kit** can be added to the **4Bond Lifter with Molecular Bonding Additives** service to provide extra strengthening and additional hair health benefits.

ON-SCALP: Mix 1 scoop **4Bond Lifter with Molecular Bonding Additives** with recommended amount of manufacturers developer/peroxide bringing it to desired working consistency. **Do not use 30 or 40 volume developer/peroxide for on-scalp mixtures.**

OFF-Scalp: Mix 1 scoop **4Bond Lifter with Molecular Bonding Additives** with recommended amount of manufacturers developer/peroxide bringing it to desired working consistency. **4Bond Lifter with Molecular Bonding Additives must be shampooed from the hair after desired lift has been achieved.**

INGREDIENTS: Potassium Persulfate, Sodium Silicate, Ammonium Persulfate, Potato Starch, Sodium Stearate, Rice Flour, Ethylhexyl Pelargonate, Xanthan Gum, EDTA, Hydroxyethylcellulose, Silica, Keratin Amino Acids, Aloe Barbadensis Leaf Juice, Chenopodium Quinoa Seed Oil, Adansonia Digitata (Baobab) Seed Oil, Persea Gratissima (Avocado) Oil, Panthenol, Sodium Chloride, CI 77007

FOR EXTRA HAIR HEALTH & CONDITIONING

Adding 4Bond Molecular Bonding Complex to Lightening Services

The amount of 4Bond used depends on the amount of powder being used, not the combined amount of developer and powder.

Mix powder and preferred developer together for desired level of lift. There is **NO NEED** to increase your developer volume when using 4Bond Molecular Bonding Complex.

When mixing developer with less than a 1 oz / 28 grams per scoop of lightening powder, using the included measuring cup, add 1/8 oz / 5 ml of 4Bond Molecular Bonding Complex.

When mixing developer with 1-2 oz / 28-57 grams of lightening powder, add 1/4 oz / 7.5 ml of 4Bond Molecular Bonding Complex.

NOTE: Processing time is reduced considerably when using **TCA, The Color & Lightener Accelerator** additive during service. For more information on the benefits of using **TCA**, visit: <https://dennisbernard.com/tca>

If hair is too porous, using less of the 4Bond Molecular Bonding Complex may solve any over saturation issues during the deposit or lift processing stage.

Once the foiling is complete, check the first foil to monitor the processing time. Remember, fine textures will process quicker than coarse textures. If needed, a heat source may be applied to the last foil areas.

Once processing is complete, remove foils and rinse thoroughly. If a toner/gloss is required follow the instructions for color/gloss applications.

Thoroughly rinse. Shampoo with 4Bond N' Plex Bond Building Shampoo and rinse hair thoroughly. Spray 4Bond Leave-In Fortifying Treatment into hair. Add your favorite styling products, style as desired.
