## MADE WITH SUSTAINABLE MATERIALS

- Aluminum and glass are amongst the most recycled materials we use with 75-80% still in use today.
- Post consumer resin (PCR) recycled plastics are made from plastics used by consumers, usually from bottles. The carbon footprint of producing PCR is 60% less than producing virgin plastic.
- Using recycled materials extends their use, keeps them out of landfills, reduces microplastics in the environment, and expends less pollution into the air than producing from raw materials.
