

CLEANING & MAINTENANCE

F O U N D — S P A C E

CLEANING —

GENERAL –

Less is more. It's best to clean the sauna as little as possible.
Leave the doors open at the end of the day to air the space.

TIMBER –

The timber is first grade and hypoallergenic. Ensure your members are sitting on a towel and provide a matt for the floor. This will absorb the sweat.

If you are leaving the timber untreated, remember than any agent you use, including water, will be absorbed by the timber.

If you are treating the timber with Kunos Natural Oil Sealer or equivalent, then you can apply a natural agent such as tea tree mixed with water.

Prepare a water bottle spray with water and 2 caps of tea tree or eucalyptus oil. Gently spray the surface and wipe with a dry cloth or paper towel.

GLASS –

Use water bottle spray with 50% metalated spirits. This won't leave streaks.

MAINTENANCE —

There is no maintenance you need to perform.

If you ever need to contact a member of our service team for technical support, you can connect with the team at:
