

## Warning

- Activator (small bottle) has a strong smell but NOT harmful, apply in ventilated area.
- Product is sticky. Use of gloves and mask are recommended.
- Keep activator (small bottle) closed after each use.
- Keep out of reach of children.
- Store at room temperature.

**Important:** if you are using mug press by Cricut, then you do not have to worry about press temperature and pressure. It does them automatically. We highly recommend using Cricut mug press to achieve a good results as regular mug press causes a lot issues (design fading, burning mug, poor result etc.) You might not achieve good results by using regular mug press.

**Directions:** (Scan the barcode at the bottom of second page for step by step video instructions.)

### 1 MIXING

Add 1 ml of the activator (small bottle) per 20ml of sublimation coating coating (big bottle) 1:20 ratio and stir thoroughly

### 2 APPLYING

Clean your hard substrate (mug), apply you coating with a brush or spray gun and let it dry.

### 3 CURING

Once dry, cure the substrate in oven at 380f for 7 minutes then let it cool down before you apply your design.

### 4 PRESSING

Press mug 200 to 250 seconds with medium pressure at 380 F (We highly recommend using Cricut mug press, it applies the right amount of heat and pressure automatically).

Keep in mind sublimation in general takes practice so do not give up in the first try. Our product had been tested on so many mugs, tumblers, wood product and it works like magic. if you are not achieving good result that you could be related to ink, sublimation paper and mainly heat press you are using. If you have any question on how to use the product, please do not hesitate to contact us, our support team is standing by to assist you.

## Tips for sublimating on other substrates:

These steps can be followed to sublimate on other substrates such as wood, metal, tumblers, tiles etc.) the only difference is the curing time in the oven, so you will need to figure it out for each material, that can be achieved simply by few tries.

## FAQs:

**Q: Why the image I transfer is a little light, faded or burnt?**

**A:** There are many reasons to influence the results: ink, paper and major one is regular heat press temperature, time and pressure. We highly recommend using Cricut Mug press, regular mug press causes a lot issues such as design fading, burning mug, poor result.)

**Q: What is the recommended brush for this product so no lines are seen and coverage is even?**

**A:** Use the foam brush that came with product. you can buy bunch of them at home depot. So far, that is the best brush we found that works well, however, you can try different brushes and see what works for you best.

**Q: Can I sublimate on regular mug (uncoated)?**

**A:** Yes, you can. Basically, our coating will allow you to coat any hard surfaces and turn it into sublimation ready substrate.

**Q: Can I use regular printer to print my design?**

**A:** No, you CAN NOT. you will need a sublimation printer, sublimation ink and sublimation paper.

**Q: Is it safe to use your kitchen oven for curing?**

**A:** No, we highly recommend using convection oven or toaster oven separately for curing.

**Q: Can I mix the whole bottle?**

**A:** Yes, you can, but it must be used within an hour because it solidify.

## NOTICE

- Use sublimation ink, do not use regular ink, pigment ink or dye ink.
- Use sublimation paper, do not use regular paper.
- Adjust the appropriate temperature according to your own equipment. Highly recommended to use Cricut mug press and NGOODIEZ sublimation paper and Ink.
