

Audio Matrix System

Hi-fidelity Audio Network for Language Labs

If you prioritize offering high-fidelity communication quality with no perceptible delay, the SmartClass audio matrix system option is just what you need!

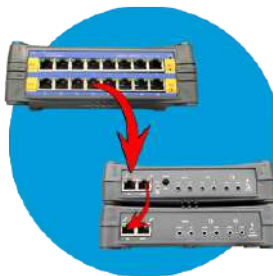

SmartClass Advantages:

- Crystal clear communication between teacher-students and students-students
- Real-time processing (no delay)
- Better representation of human voice (no digitization/loss of quality)
- Excellent cost / quality trade-off

How it works:

SC2500 Bil-s or Bil-t are installed under the desk, connect to the device sound card and the headsets.

SC2500 AM is connected to the Audio Mixers (SC2500 Bil-s or Bill-t) through Cat5 cables (one per two audio mixers).

Teachers controls communication from the SmartClass Live software. The audio matrix is connected to the teacher's computer through a USB adapter.

Analog intercom systems are extremely simple and effective. Their sound quality is unmatched because teachers and students are linked to the intercom system by a dedicated intercom cable. Ask us for our specification sheets for additional technical information.
