Thank you for your purchase of our products.
Read this user guide carefully before use.

Product description:

Ultrasonic scare that works without the use of pesticides.

Specifications:

Product name:	Ultrasonic rodent repeller
Model:	UR02
Working voltage / Power:	DC 9V/300mA
Input:	100-240V, 50/60Hz
Power consumption:	Less than 2.7W
Range:	Up to 120 m ²
Frequency:	22-35/25kHz
DB Value:	100-125 dB
Dim(cm):	9.2 * 10.5 * 7.6 (L * W * H)
N. Weight:	181g

Installation:

1. Plug-ins: Plug the rodent repeller into an AC100-240V outlet, the blue/green light will light up, indicating the product is working properly.

2. Select the desired work mode

TEST-Blue light is on. This display simulates the sounds that rodents hear, proving that the product works normally under ultrasonic mode.

ULTRA-Blue light is on. The frequency conversion ultrasound of 22-35kHz starts to work normally.

TRANS-Green light is on.

25kHz ultra solid frequency ultrasound starts working normally.

DUO-Both ultrasound waves work at the same time and the blue and green indicators light up at the same time.

3. LED strobe light setting

The LED strobe lights are not on by default; Press the LED button on the back, under the influence of light control, they will not light up during the day, but light up and flash at night; The flash rate is divided into three modes, each working for 30 seconds and working by cycle; If you don't want to use the LED Strobe Lights feature, simply press the LED button again to turn off the flashing light.

4. Clear all surrounding objects away from the rodent repeller, the ultrasonic, that emitted from the deterrent, does not pass through walls, furniture, cupboards or other large objects. There must be no obstacles within 1 meter of the product.

5. The product must work continuously all year round.

Warnings:

1. This product is for indoor use only. Do not place the product outdoors or in high temperature and humidity.
2. Since most pests live on the ground, the product should be installed as low as possible from the ground.
3. Do not use if you have pet rodents (such as hamsters, guinea pigs, etc.), rabbits or spiders, as the device may cause them discomfort.
4. This product begins to work within a few days of use. According to different conditions of use, a better effect can only be seen after continuous use for 2-4 weeks.
5. At the beginning of use, mice may become more active. It is a sign that they are being stimulated and after a while they disappear. Although a few cannot escape, they become lethargic, lose their appetite, and lose their ability to breed and destroy.
6. Normally, the LED night lights will turn on automatically at night and turn off at some point. If the night light function is not needed, you can press the LED ON/OFF button to turn off manually.
