## Mole scarecrow - powered by solar cells

Thank you for purchasing our products.

Read this user guide carefully before use.

If you have any questions about your order or about this product, please feel free to contact us.

### PRODUCT DESCRIPTION:

### SPECIFICATIONS:

Product name	Mole scarer
Model no.	AR08
Materials	ABS + PC
Weight	73 grams
Supply	Solar cells
Battery	1.2V, 80mAh, NI-MH Button
Solar cell	2V, 50mAh, Amorphous silicone
Effect	Sonic pulses of 2sec every 30 seconds
Waterproof	IP65
Coverage area	Up to 1500 m2

The mole scarer covers an area of approx. 1500m<sup>2</sup>. It works by means of an unpleasant sound that is transmitted at regular intervals.

A solar cell built into the upper part charges a rechargeable battery, which ensures safe operation day and night. A place that is guaranteed as much sun as possible must be chosen for the location - this ensures maximum charging of the rechargeable battery. Shadows from houses, trees and the like have a negative effect with loss of performance.

### INSTALLATION:

#### 1st:

Use a wooden stick or metal spear to make a hole for the mole scarecrows in the ground where they are to stand.

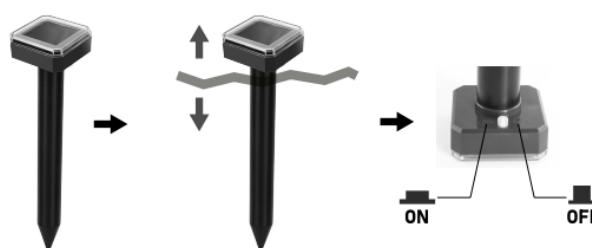

**NOTE:** Do not strike or push on the mole scarecrow itself, it may damage it.

#### 2nd:

Insert the tip into the hole so that the top is flush with the ground. If it is placed above the ground, there may be a risk of tripping. It is possible to place the mole scarer completely in the ground, this prevents the chance of destroying it with the lawn mower or other garden tools.

#### 3rd:

Turn on the mole scarer.

### NOTE

Typically, the mole scarer must be in operation for 2-3 weeks before the moles leave the area.

### WARNINGS:

- \* Do not use if they are damaged during transport. Contact us immediately if this is the case.
- \* Do not press on the front of the solar panel, it may cause damage.
- \* Keep packaging away from small children, it contains small parts.
- \* Changes to the product will void the warranty.
