 **AKKO**®

We as AKKO Oto. Mak. Hird. San. Tic. Ltd. Şti, which has been founded by Abdullah KARAKUŞ in 1986, produce Turning Tool Holders, Threading and Grooving Tool Holders, U-Drills, Milling Tool Holders and Precision Tool Holders (OEM Tool Holders). We produce standard 8000 kinds of tool holders with production capacity of 500.000 pieces per annum in an area about 8000 square meter. We are going on exporting 75 countries including European, Asian, African, Asian, South American Countries and Middle East Countries. We keep ready about 300.000 pieces produced products in our stock. Steel Raw materials that we make produced especially for us are delivered our factory and all production process are made in our factory. All kind of process from machining of steel to heat treatment and coating on our tools are made in our integrated factory AKKO.

Die Fa. Akko wurde 1986 von Abdullah Karakuş gegründet und produziert Dreh-, Gewinde- und Stechwerkzeuge für Wendeschneidplatten. Ebenso gehören Wendeplattenbohrer, Wendeplattenfräser und Sonderwerkzeuge für Wendeplatten zum Lieferprogramm. Alle Werkzeuge sind auch als OEM-Version lieferbar. Wir fertigen 8000 verschiedene Standardartikel auf einer Fläche von 8000 Quadratmetern. Unsere jährliche Produktionsmenge beträgt ca. 500000 Stück. Wir exportieren in 75 verschiedene Länder in Europa, Asien, Afrika, Südamerika und Mittlerer Osten. Unsere Lagerkapazität beträgt ca. 300000 Stück. Das eingesetzte Rohmaterial wird speziell für unsere Firma produziert. Alle weiteren Produktionsschritte wie z.B. mechanische Bearbeitung, Wärmebehandlung und Beschichtung unserer Werkzeuge erfolgen auf unseren eigenen Maschinenanlagen.

TECHNICAL INFORMATION

User's Guide For AKKO U-Drills

Before connecting your U-Drill to CNC lathe, you have to check if the turret is eccentric from the center or not. If there is any eccentricity in your turret, never use your U-Drill;

Processes that should be done to fix the turret :

1. A cylindrical part whose surface is precision and whose length and diameter is the same with the U-Drill that you will use, should be mounted to the holder of turret and X value of the lathe should be brought to zero (0).
2. Comparator should be mounted to chuck. The end of the comparator should be contacted (touched) to the surface of the part that we mounted on the turret.
3. The comparator that we mounted on the chuck should be turned 360-degree with the chuck and turret should be zeroed by that turning according to changing rate of comparator.

Cutting Speed and Revolution That are Needed For Using (Running) Your U-DRILLS More Productively

Grup No.	Material	Material Type	Cutting Speed Vc (m/m)
1	Non-alloy steel and free cutting steel	C1010. Automat etc.	220
2	Low alloy steel and cast steel	C1030 - 106 etc.	200
3	Alloy steel and tool steel	CK-45, 4140, 7131 etc.	170
4	Hot Work Steel and Stainless Steel	Impax etc.	150

P.S. : The cutting speed may be concerned with the type of the insert that you use.

Fistly, choose the material to make calculation of revolution. You should multiply the cutting speed (Vc) of the material that you chose by 1000 and divide by 3.14. You should divide the value that you found by the diameter of U-Drill. For Example : If our material is alloy steel and tool steel (3rd group), diameter of the U-Drill is 25 mm, cutting speed is 170, we should calculate as following; $170 \times 1000 = 170000 / 3.14 = 54140$, $54140 / 25 = 2166$ rpm is the result that we found (Spindle Speed) Feed rate of the lathe is concerned with the U-Drill that you will use and changes between 0.05 and 0.10. The user sets it according to cut of cutting insert.

Feed Calculation For Central Machine :

2166 spindle speed, that we found as a result of above mentioned calculation, should be multiplied by cutting insert feed (mm/r) between 0.05 and 0.10 feed choisses. Example 1 : $2166 \times 0.05 = 108$
 Example 2 : $2116 \times 0.10 = 217$ The results 108 and 217 are the feed mm/m calculation for central machine.
 Note: Cooling water pressure of lathe must be minimum 6 bar for our D4 u-drills and u-drills longer than D4.

Calculating Spindle Speed and Feed Rate For Milling Process

Vc.	S	D	F	Z	fz	FORMULAS
Cutting Speed (Please read from the back-side of cutting insert box)	Spindle Revolution rpm	Milling Tool Diameter	Feed Rate	Number of Effective Tooth	Feed Per Tooth (Please Read From The Back Side of Cutting Insert Box)	Calculation of Revolution : $S = (Vc \times 1000) / (3,14 \times D)$ Feed Rate Calculation : $F = S \times Z \times fz$

For Example : We will make milling with milling tool whose diamention is D 50 mm, whose theeth number is Z=5. The spindle revolution was written as Vc=200m/mn at the back side of cutting insert box. Let's calculate the revolution that should be entered to the milling machine : Vc=200 m/mn D=50 mm

S = Firstly Cutting Speed is multiplied with 1000, the result should be divided by 3.14 , the last result should be divided by diameter of milling tool.

$$S = 200 \times 1000 = 200000 \longrightarrow 200000 / 3,14 = 63663 \longrightarrow 63663 / 50 = 1273 \text{ rev } S = 1273 \text{ rev / mn}$$

After finding spindle revolution, let's find feed rate : milling tool with Z=5 teeth and we read fz=0,12 from the back side of cutting insert box.

F = Tooth number should be multiplied with revolution, the result should be multiplied with feed per tooth.

$$F = 1273 \times 5 = 6365 \longrightarrow 6365 \times 0,12 = 763 \quad F = 763 \text{ mm / mn}$$

Revolution that should be entered to the milling machine = S 1273 Feed Rate that should be entered to the milling machine = F 763 average value.

P.S : The values Vc and fz has to be written at the back side of the cutting insert. If these values were not written on the cutting insert box, please find them from cutting insert catalogue. If the material that you will work is steel, please read Vc and fz values that were written on the part P, if it is stainless steel please read from the part M, if it is cast iron please read from the part K.

TECHNICAL INFORMATION

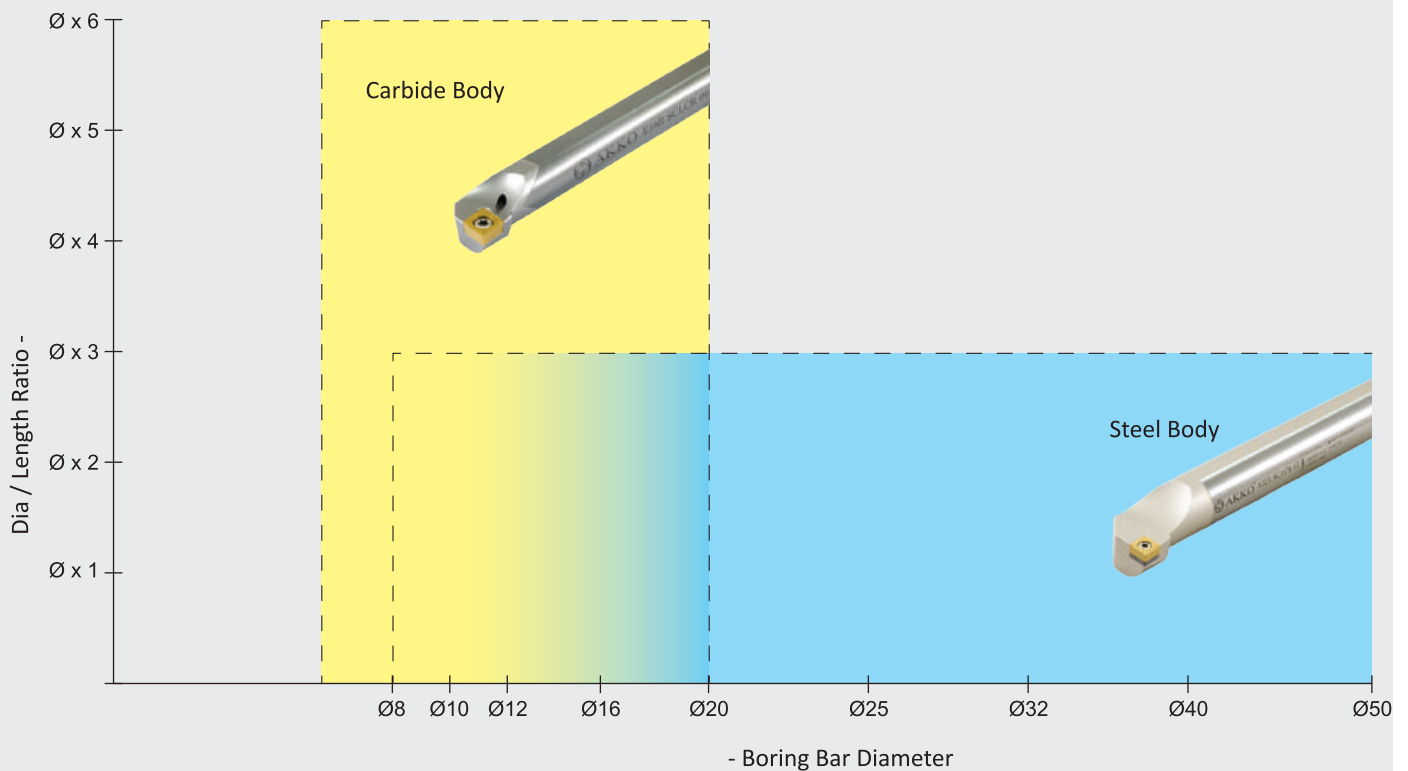

Recommended Tightening Torque

- Read below information before tightening the tool.
- Check screw set's the screw size and together with mounting arbor inner dimension of screws.
- When tightening head to an arbor, follow the related tightening torque in the table.

Screw	Torque (N.m)
M6	8
M8	23
M10	46
M12	80
M16	90

Internal Boring Bars Application Guide, Related to Body Material

Application Guide For T-Slot Milling

When T slot machining steel, the workpiece must be machined as shown in the drawing to ensure smooth chip evacuation.

Example: Before slotting with the T - slot milling cutter - code ATSM90-CC06-D32X10-W25-L100-Z04, The area of the neck of the tools to be worked and must be machined by End-Mill. In this case, it is very wrong to machining the slot completely. Bottom area (0.8 x b = 0.8 x 10) should be left 8 mm without machining. This area's operation must be machined by the T - slot milling cutter which is also necessary for the healthier work of the tool holder.

Slots to be machined must be free from chips for smooth machining.

α = 5 Kat Dayanıklılık **α = 5 Times Long Life****Alfa Kaplamanın Avantajları****Alpha Coating Advantages**

- **Yüksek aşınma direnci**
High resistance to abrasion
- **Yüksek yüzey sertliği**
750-800 Vickers
High surface hardness
750-800 Vickers
- **Temperlemeye karşı yüksek direnç**
High resistance to tempering
- **Yüksek yorulma mukavemeti**
High fatigue strength
- **Yüksek çizik ve çentik direnci**
High scratch and impact resistance
- **Paslanmaz olmayan çelikler için daha yüksek korozyon direnci**
Resistant to corrosion of non-stainless steel

takımınız neden
daha uzun ömürlü
olmasın?...

longer tool life... **α Çevre Dostudur. α is friend of environment.****İnsan sağlığı açısından zararlı değildir. Is not harmful to human health.****Gaz ve diğer atıkları çevreyi kirlilemez. Gas and other wastes will not pollute the environment.**
