# LOGIBLOCS

## e·BUILDING BLOCKS SYSTEM

Logiblocs is the electronic discovery system that helps children understand the world of technology that we live in. By plugging the blocs together, children can build control systems and various gadgets that are fun and useful!

Logiblocs is a powerful learning tool for teachers of the Computer Curriculum at key stage 1 and 2, and introduces children to logic, control, automation and robotics, and inspires them to design and experiment. Inside each bloc is a printed circuit board and every bloc is colour coded to describe its function.

- Yellow Logiblocs trigger the system by creating a signal from a variety of sensors.
- Orange Logiblocs “think” and they make sure everything happens in the right place and at the right time.
- Red logiblocs are the outputs. They “talk” to the outside world through light and sound or by turning things off.
- Blue Logiblocs send the signals from place to place.
