Down slide screen will display the interface,(As in the first picture)

1. Click brightness adjustment, you can adjust the screen brightness you need according to the usage.

2. If you need to use the watch with another phone, you need to reset the watch. Click Restore factory settings, the watch will be restored to the initial state and restart automatically, at this time all data on the wristband is cleared.
3. Click the "ABOUT" icon, you can check the version information, Bluetooth MAC address, battery percentage display and Bluetooth connection status.

Why the watch can't receive the message notification?

Since Android mobile phone background will automatically clean up the App which not commonly used, it will cause the watch connection to drop and no longer push the message.

1. Make sure turn on message push in Dafit setting.
2. Make sure the message can be displayed in mobile phone's notification bar, message notification is pushed by reading the phone notification bar, the watch can't get notification if the message push closed in mobile phone setting.

Note: Find notification settings in phone settings, turn on WhatsApp, Facebook, Twitter, Phone, SMS.

Getting to know your Device

It is forbidden to throw this product into the fire to avoid explosion. The battery life varies according to the environment and usage mode. Warning: This product is not a medical device. The Watches and its applications should not be used for diagnosis, treatment, or prevention of diseases and illnesses. please consult qualified medical doctor first if you want to change your habits such as exercises and sleep to avoid causing serious casualties.

Our company reserves the right to modify and improve the functions which described in this manual without prior notice. At the same time, we also reserve the right to continuously update the product. All contents are subject to the actual product.

Why does the blood pressure data is different from the Sphygmomanometer?

The difference between the smartwatch data and the sphygmomanometer is determined by a variety of factors. The measurement site of the sphygmomanometer is in the radial artery, and the measurement site of the watch is the two main branches of the arteriole. Normally, the difference value between aortic blood pressure measurement and micro arterial measurement is 3~40. because of the blood flows in the artery in the direction of the centrifuge, If you use the smartwatch and sphygmomanometer to measure at the same time the sphygmo-manometer band make your elbow under pressure. The blood pressure cannot flow smoothly to the lower branch of the artery and increased vascular tension, which will make the difference larger.

Why can't wear the smartwatch to take a bath&hot springs&sauna?

The bathwater temperature is relatively high, it will produce a lot of water vapor, and the water vapor is gas phase. Its molecular radius is small, it is easy to infiltrate from the shell gap of the watch, and when the temperature drops, it will recondense into a liquid phase. Water droplets can easily cause short circuit inside the watch, damage the circuit board and damage watch itself.

Special attention: For other issues of watch's usage, you can get detailed answers in the app suggestion feedback.
